Process Dynamics and Control Dale E. Seborg, Duncan A. Mellichamp, Thomas F. Edgar, Francis J. Doyle, III, 2010-04-12  
This third edition provides chemical engineers with process control techniques that are used in practice while offering detailed mathematical analysis. Numerous examples and simulations are used to illustrate key theoretical concepts. New exercises are integrated throughout several chapters to reinforce concepts. Up to date information is also included on real time optimization and model predictive control to highlight the significant impact these techniques have on industrial practice. And chemical engineers will find two new chapters on biosystems control to gain the latest perspective in the field.

Chemical and Biological Process Dynamics and Control (Color Edition) George Stephanopoulos, 2025  
George Stephanopoulos' new book is an introductory text to the theory and practice of dynamic chemical and biological process engineering. It is intended to address the educational needs of a first undergraduate course in process dynamics and control and to complement advanced undergraduate or graduate courses on the same subject. It is also useful for practicing engineers who want to deepen their understanding in the foundational aspects of process dynamics and control. The book contains 31 chapters organized in 10 parts. The chapters illustrate the material with more than 450 figures, diagrams, and tables, and over 200 Examples, case illustrations, and Practice Exercises, many of which are supported by MATLAB or Simulink files. The book's website contains the following material: a) Nine process modules for Practice Exercises; b) MATLAB functions and Simulink facilities used throughout the book; c) many exercises to practice the book's material; d) answers to select exercises; and e) more than 150 MATLAB and Simulink files to illustrate the numerical results of methods presented in the book. These files can be edited to define new processes and solve new problems.
