Linear Regression David J. Olive, 2017-04-18 This text covers both multiple linear regression and some experimental design models The text uses the response plot to visualize the model and to detect outliers does not assume that the error distribution has a known parametric distribution develops prediction intervals that work when the error distribution is unknown suggests bootstrap hypothesis tests that may be useful for inference after variable selection and develops prediction regions and large sample theory for the multivariate linear regression model that has m response variables A relationship between multivariate prediction regions and confidence regions provides a simple way to bootstrap confidence

regions These confidence regions often provide a practical method for testing hypotheses There is also a chapter on generalized linear models and generalized additive models There are many R functions to produce response and residual plots to simulate prediction intervals and hypothesis tests to detect outliers and to choose response transformations for multiple linear regression or experimental design models This text is for graduates and undergraduates with a strong mathematical background The prerequisites for this text are linear algebra and a calculus based course in statistics

Christian and Humanist Foundations for Statistical Inference

Andrew M. Hartley, 2007-12-01 The Philosophy of the Law Idea PLI analyzes the manner in which religious beliefs control scientific theorizing Religious beliefs control philosophical overviews of reality Overviews of reality

also called ontologies try to discover and disclose the essential nature of reality They are concerned with what kinds of things exist and with the connections between the various types of properties and laws in human experience Among such overviews are the biblically consistent overview provided by the PLI and certain humanist mathematicist and subjectivist overviews The science of statistical inference seeks to evaluate the credibility of scientific hypotheses given empirical data This essay reviews various popular paradigms or systems of theories concerning the ways that credibility may be evaluated and identifies some ways that these religiously controlled overviews of reality have in turn controlled statistical paradigms In particular one paradigm harmonizes with the PLI s overview another with the subjectivist overview and two others with the mathematicist overview
