

AP Stats Chapter 3 Notes: Examining Relationships

Activity 3A: Height and Hand Span

1. Measure your height in cm and the span of your hand in cm. The span of your hand is the distance between the tip of your thumb and the tip of your pinkie finger when they are fully stretched.
2. Record your data on the table on the board.
3. Copy the table onto your paper below.
4. Make a graph of the data. The horizontal axis will be hand span and the vertical will be height. Insert a break in scale symbol on each axis so you don't have to start at 0. (//)
5. Scale the horizontal axis with increments of 0.5 cm starting at 15 cm. Scale the vertical axis in 5 cm increments starting with 135 cm.
6. Plot each point as accurately as possible and compare with others as you finish.
7. Discuss what the graph tells you about the relationship between hand span and height. Summarize your observations in a sentence or two.

Types of variables:

- a. Lurking variable: **an unmeasured variable that affects both of the measured variables.**
Association not causation. Ice cream sales up, so are drownings, but that is not a causation, just related.
- b. Response variable: **measures an outcome of a study. Y variable**
- c. Explanatory variable: **helps explain or influences changes in a response variable. X variable.**

Remember that just because you label one variable response and one explanatory, doesn't necessarily mean that a change in one causes a change in the other.

Scatterplots and Correlation:

A scatterplot shows the relationship between two quantitative variables measured on the same individuals. The explanatory variable usually is plotted on the x-axis and the response on the y-axis.

Interpreting a Scatterplot:

- Look for the overall pattern and for striking deviations from the pattern.
- Describe the pattern using the direction, form and strength of the relationship.
- Are there any outliers that don't fit the pattern?

Direction:

Negative Association:

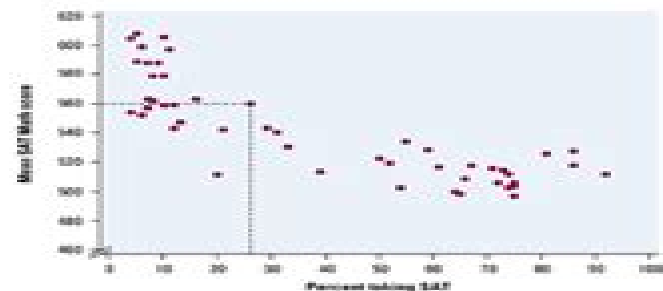

Positive Association:

Form: Is it linear or curved?

Are there any clusters?

Strength: How close do the points follow a clear form?

Are there any outliers?
