Synopsis of API 610, 12th Edition (Major changes wrt 11th Edition)

API 610, the standard specifies requirements for Centrifugal Pumps, including pumps running in reverse as hydraulic power recovery turbines (HPRTs), for use in petroleum, petrochemical, and gas industry process services. Latest 12th Edition has just been released in the last week of January, 2021.

Key features and major changes of 12th edition, are highlighted in this write up with the objective to support Pump professionals with quick overview who already know about the API 610, 11th edition, which is 10 years old. Deliberately, I have avoided to discuss on interpretation, implications and effect of these changes to OEM or Purchaser. This is not a complete highlight of 12th edition. You may not find many fundamental and important recommendations in this article, if those are the same as 11th edition. Reference of API section is provided in parenthesis. Off course, this list is selective, not exhaustive.

Reliability concept	Shall be designed and constructed of 20 years and at least 3 years of uninterrupted operation.	Only equipment that is field proven, as defined by the Purchaser, is acceptable. API 691 can provide guidance on this. In the event no such equipment is available, the vendor shall submit an explanation of how their proposed equipment can be considered field proven.
		The vendor shall advise in the proposal any component designed for a finite life.
		The purchaser shall specify if equipment will be supplied in accordance with API 691.
Parallel Operation		Additional recommendations: the head values of the pumps at any given flow within the preferred operating range shall be within 3 % of each other for pumps larger than 3 in. (80 mm) discharge.
Curve Shape		Pumps with a continuously rising head curve are preferred for all applications, but this is not possible with all pump types. Head curve shape is dependent on several factors specific to the pumps hydraulic design.
