*The Role of Organisational Change Management in Offshore Outsourcing of Information Technology Services* T. R. Ramanathan,2009-03 This research study seeks to understand the nature of organisational change with respect to offshore outsourcing of information technology services in a multinational pharmaceutical company and to examine the effectiveness of approaches used to manage this change so that lessons may be drawn from these experiences Despite the abundant literature on effective organisational change management the key factors that need to be managed properly at different stages of the offshore outsourcing process are not well understood The research adopts a processual view to paint a broad picture of the issues involved in these different stages A generic process model of change based on the review of the change literature was first developed to represent how change was intended to occur This model focuses on the following four stages in the change process context diagnosis and planning implementation and institutionalisation The research employs an interpretive case study approach and draws on fieldwork from three independent information systems departments cases of the company where offshore outsourcing programmes were implemented Qualitative data from semi structured interviews direct observation and document analysis are analysed by applying the generic process model to produce a detailed account of the way in which change was managed in the case organisations The findings reveal that a combination of contextual factors both external and internal to the company influenced the adoption and use of offshore outsourcing in the case organisations Externally the economic forces were found to be the main catalyst for the change while

internally the role of the executive leadership and the lack of internal resources further explain the motivations behind the adoption of offshore outsourcing. The study illustrates that achieving successful outcomes from offshore outsourcing activities critically depends on the organisation adequately addressing a number of factors such as conveying a sense of urgency, developing and communicating the vision, identifying the benefits of change and how they will be delivered, generating short term wins, providing education and training, developing a fit between the change and organisational culture etc throughout the change process. The findings also highlight the effects of offshore outsourcing on the case organisations including change in job roles and responsibilities and organisational learning activities that enable corrective actions to improve change management efforts. An important contribution of this research is the development of a model providing a more comprehensive understanding of the change process associated with the implementation of offshore IT outsourcing. Recommendations for policy makers and change managers to improve change management practice based on the research findings as well as recommendations for further research form a significant part of the conclusions. **Leadership**

**Competencies Of A Clinical Trial Project Manager** John Petrera, 2024-06-17 Leadership competencies of a clinical trial project manager is unique in that this qualitative inquiry research project not only explores the specific top leadership competencies of project managers involved in pharmaceutical clinical trials but the concepts reviewed in this book are applicable broad spectrum to multiple professional fields. The proposed leadership framework combines elements of leadership competencies, project management competencies, personal competencies and includes a review of the leadership types from the traits theory of leadership. The leadership concepts described are universal and can be applied to improve any leader's abilities. While this book focuses on clinical trial project managers, the concepts and best practices apply to all PMs within pharmaceuticals or in any other field. The derived PM competency framework is transferrable to PMs in numerous industries and may also provide applicable guidance to others regardless of their profession. Ultimately, the expansion of the PM triangle is a useful concept that many will find interesting. Additionally, personal competencies can improve personal effectiveness, achievements and actions. This project identified 5 themes to include: a) CTPM experience and knowledge, b) leadership competencies, c) leadership types/styles, d) personal competencies and e) project management competency development. PMCD. The 5 themes identified are all critical to understanding the perspectives obtained from the study participants regarding leadership competencies to maximize efficiencies of research and development. The results of this study can: a) potentially assist new CTPMs, b) provide a refresher for CTPMs seeking improvement, c) provide support for project managers in general and d) may assist hiring managers in determining the leadership skills to seek. The results from this study may support the project program and portfolio managers from various industries to better understand the leadership competencies and the overall framework that support project management. At the same time, these 5 themes interpreted in the broadest terms may be helpful to you. *Computer Usage In Fourth and Fifth Grade Elementary Classrooms*, *Global*
