Parvin,2005-11-29 It is with great pleasure that I welcome you to Lake Tahoe for the 2005 Int national Symposium on Visual Computing ISVC ISVC provides a common umbrella for the four main areas of visual computing vision graphics visu ization

and virtual reality The goal of ISVC is to provide a common forum for researchers scientists engineers and practitioners throughout the world to present their latest research findings ideas developments and applications in the broader area of visual computing The program consists of six oral sessions two poster sessions seven special tracks four keynote presentations and one invited presentation The response to the call for papers for the general ISVC 2005 sessions was very good We received over 110 submissions from which we accepted 33 papers for oral presentation and 26 papers for poster presentation Special track papers were solicited separately through the organizing and program committees of each track A total of 32 papers were accepted for inclusion in the special tracks All papers were reviewed with an emphasis on their potential to contribute to the state of the art in the field Selection criteria included accuracy and originality of ideas clarity and significance of results and presentation quality The review process was quite rigorous involving two or three independent double blind reviews followed by a one week discussion period During the discussion period we tried to correct anomalies and errors that might have existed in the initial reviews Despite our efforts we recognize that some papers worthy of inclusion may not have been included in the program We offer our sincere apologies to authors whose contributions might have been overlooked

I wish to thank everybody who submitted their work to ISVC 2005 for review

#### **Multiprocessor Systems-on-Chips** Ahmed

Jerraya, Wayne Wolf, 2005 Modern system on chip SoC design shows a clear trend toward integration of multiple processor cores on a single chip Designing a multiprocessor system on chip MPSoC requires an understanding of the various design styles and techniques used in the multiprocessor Understanding the application area of the MPSoC is also critical to making proper tradeoffs and design decisions Multiprocessor Systems on Chips covers both design techniques and applications for MPSoCs Design topics include multiprocessor architectures processors operating systems compilers methodologies and synthesis algorithms and application areas covered include telecommunications and multimedia The majority of the chapters were collected from presentations made at the International Workshop on Application Specific Multi Processor SoC held over the past two years The workshop assembled internationally recognized speakers on the range of topics relevant to MPSoCs After having refined their material at the workshop the speakers are now writing chapters and the editors are fashioning them into a unified book by making connections between chapters and developing common terminology Examines several different architectures and the constraints imposed on them Discusses scheduling real time operating systems and compilers Analyzes design trade off and decisions in telecommunications and multimedia applications

#### Embedded Processor-Based Self-Test Dimitris

Gizopoulos,A. Paschalis,Yervant Zorian,2013-03-09 Embedded Processor Based Self Test is a guide to self testing strategies for embedded processors Embedded processors are regularly used today in most System on Chips SoCs Testing of microprocessors and embedded processors has always been a challenge because most traditional testing techniques fail when applied to them This is due to the complex sequential structure of processor architectures which consists of high performance datapath units and sophisticated control logic for performance optimization Structured Design for Testability DfT and hardware based self testing techniques which usually have a non trivial impact on a circuit s performance size and power can not be applied without serious consideration and careful incorporation into the processor design Embedded Processor Based Self Test shows how the powerful embedded functionality that processors offer can be utilized as a self testing resource Through a discussion of different strategies the book emphasizes on the emerging area of Software Based Self Testing SBST SBST is based on the idea of execution of embedded software programs to perform self testing of the processor itself and its surrounding blocks in the SoC SBST is a low cost strategy in terms of overhead area speed power development effort and test application cost as it is applied using low cost low speed test equipment Embedded Processor Based Self Test can be used by designers DfT engineers test practitioners researchers and students working on digital testing and in particular processor and SoC test This book sets the framework for comparisons among different SBST methodologies by discussing key requirements It presents successful applications of SBST to a number of embedded processors of different complexities and instruction set architectures
