Arrays And Array Methods In Global Seismology:

Arrays and Array Methods in Global Seismology Yu Jeffrey Gu, 2010-02-04 In recent years the increased availability and fidelity of broadband seismic instruments have effectively narrowed the gap between exploration and global seismic applications Global seismologists are now able to take advantage of high resolution often exploration based tools to examine rock properties tens to hundreds of kilometers below surface This book reviews the key assumptions algorithms and prospects of several important array based methods in today s global and regional seismic surveys A short list of topics includes data migration PP and SS precursors Radon transform mantle triplication P to S and S to P converted waves shear wave splitting high resolution seismic tomography and ambient noise interferometry Each approach is presented in a cookbook fashion for easy comparison implementation and critique by the general readership

Monitoring a Comprehensive Test Ban Treaty Eystein S. Husebye, Anton M. Dainty, 2012-12-06 An international treaty banning the testing of any nuclear device in any environment a comprehensive test ban treaty CTBT has been on the political agenda for nearly 40 years Objections to a CTBT have been political technical or a combination of both However the possibilities seem better after the end of the Cold War In the prevailing cooperative

disarmament climate a CTBT appears likely to be approved by most countries in 1996 Hence the great current interest in monitoring technologies and capabilities Such issues are comprehensively addressed here a preamble being devoted to the political developments and setbacks over the past 40 years Since seismic means are considered the dominant monitoring element they are explored in detail Contributions cover network deployments advanced signal processing wave propagation in heterogeneous media and seismic source representations and a variety of techniques for source classification including neural networks Complementary monitoring techniques such as hydroacoustics radionuclides and infrasound are also summarised The IAEA operation for monitoring compliance with the Non Proliferation Treaty is also presented The book also includes eyewitness accounts of the Soviet 50 Mt megabomb development and test as well as the efforts made by the state to monitor the nuclear test programmes of the western powers Includes some 33 articles written by distinguished scientists active in CTBT monitoring research for decades
