Systems of Insight for Digital Transformation: Using IBM Operational Decision Manager Advanced and Predictive Analytics Whei-Jen Chen,Rajeev Kamath,Alexander Kelly,Hector H. Diaz Lopez,Matthew Roberts,Yee Pin Yheng,IBM Redbooks,2015-12-03

Systems of record SORs are engines that generates value for your business Systems of engagement SOE are always evolving

and generating new customer centric experiences and new opportunities to capitalize on the value in the systems of record. The highest value is gained when systems of record and systems of engagement are brought together to deliver insight. Systems of insight SOI monitor and analyze what is going on with various behaviors in the systems of engagement and information being stored or transacted in the systems of record. SOIs seek new opportunities, risks, and operational behavior that needs to be reported or have action taken to optimize business outcomes. Systems of insight are at the core of the Digital Experience which tries to derive insights from the enormous amount of data generated by automated processes and customer interactions. Systems of Insight can also provide the ability to apply analytics and rules to real time data as it flows within throughout and beyond the enterprise applications, databases, mobile, social, Internet of Things to gain the wanted insight. Deriving this insight is a key step toward being able to make the best decisions and take the most appropriate actions. Examples of such actions are to improve the number of satisfied clients, identify clients at risk of leaving and incentivize them to stay loyal, identify patterns of risk or fraudulent behavior and take action to minimize it as early as possible and detect patterns of behavior in operational systems and transportation that lead to failures, delays, and maintenance and take early action to minimize risks and costs. IBM Operational Decision Manager is a decision management platform that provides capabilities that support both event driven insight patterns and business rule driven scenarios. It also can easily be used in combination with other IBM Analytics solutions as the detailed examples will show. IBM Operational Decision Manager Advanced along with complementary IBM software offerings that also provide capability for systems of insight provides a way to deliver the greatest value to your customers and your business. IBM Operational Decision Manager Advanced brings together data from different sources to recognize meaningful trends and patterns. It empowers business users to define, manage, and automate repeatable operational decisions. As a result, organizations can create and shape customer centric business moments. This IBM Redbooks publication explains the key concepts of systems of insight and how to implement a system of insight solution with examples. It is intended for IT architects and professionals who are responsible for implementing a systems of insights solution requiring event based context, pattern detection, and deterministic decision services to enhance other analytics solution components with IBM Operational Decision Manager Advanced. **Hybrid**

Cloud Event Integration: Integrate Your Enterprise and Cloud with Bluemix Integration Services Jesse Aulsebrook, Richard Scott Balson, Maxime Cenatiempo, Vasfi Gucer, Shamim Hossain, Muhammad Atif Mehmood, Raj Mehra, Duy Nguyen, Bancha Setthanan, Amar Shah, IBM Redbooks, 2016-02-18. The event centric hybrid cloud integration revolves around applications running based on events or messages. The new event centric approach to hybrid cloud aims to simplify the task of managing these messages while increasing the overall reliability of the system. Event centric applications work well in the cloud due to the varying intensity and frequency of events. These fluctuations fit well into a cloud infrastructure that can dynamically scale to fit those needs. An event centric approach cuts down on communication overhead.

for an application thus helping to speed up the development process IBM Hybrid Integration Services is a set of hybrid cloud capabilities in IBM Bluemix that allows businesses to create hybrid clouds by connecting their Bluemix environment to on premises systems at the application programming interface API data or event level In November 2015 the IBM International Technical Support Organization ITS O IBM Redbooks team published a Redbooks publication that covers hybrid cloud scenarios with Bluemix for API and data integrations Hybrid Cloud Data and API Integration Integrate Your Enterprise and Cloud with Bluemix Integration Services SG24 8277 and can be found at the following website <http://www.redbooks.ibm.com/Redbooks.nsf/RedbookAbstracts/sg248277.html> Open Hybrid Cloud Event Integration Integrate Your Enterprise and Cloud with Bluemix Integration Services SG24 8281 is a companion book to SG24 8277 and focuses on event centric hybrid cloud integrations with Bluemix
