Chapter 6: A Tour of the Cell

Concept 6.1 To study cells, biologists use microscopes and the tools of biochemistry

1. The study of cells has been limited by their small size, and so they were not seen and described until 1665, when Robert Hooke first looked at dead cells from an oak tree. His contemporary, Anton van Leeuwenhoek, crafted lenses; and with the improvements in optical aids, a new world was opened. *Magnification* and *resolving power* limit what can be seen. Explain the difference.

Magnification: Ratio of actual size to visible size
Resolving power: Clarity

2. The development of electron microscopes has further opened our window on the cell and its organelles. What is considered a major disadvantage of the electron microscopes?

Cell dies in the process

3. Study the electron micrographs in your text. Describe the different types of images obtained from:
scanning electron microscopy (SEM)

Detail of surface textures (What it looks like)

transmission electron microscopy (TEM)

Detail of components (What makes up it)

4. In *cell fractionation*, whole cells are broken up in a blender, and this slurry is centrifuged several times. Each time, smaller and smaller cell parts are isolated. This will isolate different organelles and allow study of their biochemical activities. Which organelles are the smallest ones isolated in this procedure?

Ribosomes

Concept 6.2 Eukaryotic cells have internal membranes that compartmentalize their functions

5. Which two domains consist of prokaryotic cells?

Archaea, Bacteria

6. A major difference between prokaryotic and eukaryotic cells is the location of their DNA. Describe this difference.

Research in Education, 1972 **Stalinist Science** Nikolai Kremmentsov, 1996-11-25 Some scholars have viewed the Soviet state and science as two monolithic entities with bureaucrats as oppressors and scientists as defenders of intellectual autonomy Based on previously unknown documents from the archives of state and Communist Party agencies and of numerous scientific institutions Stalinist Science shows that this picture is oversimplified Even the reinstated Science Department within the Central Committee was staffed by a leading geneticist and others sympathetic to conventional science In fact a symbiosis of state bureaucrats and scientists established a much more terrifying system of control over the scientific community than any critic of Soviet totalitarianism had feared Some scientists on the other hand developed more elaborate devices to avoid and exploit this control system than any advocate of academic freedom could have reasonably hoped Nikolai Kremmentsov argues that the model of Stalinist science already taking hold during the thirties was reversed by the need for inter Allied cooperation during World War II Science as a tool for winning the war and as a diplomatic and propaganda instrument began to enjoy higher status better funding and relative autonomy Even the reinstated Science Department within the Central Committee was staffed by a leading geneticist and others sympathetic to conventional science However the onset of the Cold War led to a campaign for eliminating such servility to the West Then the Western links that had benefited genetics and other sciences during the war and through 1946 became a liability and were used by Lysenko and

others to turn back to the repressive past and to delegitimate whole research directions
