ABSTRACT

The name Aretaeus of Cappadocia has been linked with diabetes more than that of any other physician of antiquity, his texts forming a sophisticated synthesis of the previous knowledge on this disease copiously supplemented by his own observations. Gifted with a unique faculty for observing pathologic phenomena, he was able to elaborate upon earlier texts enriching them with his own original findings and numerous thoughtful reflections. Among the many diseases he dealt with, Aretaeus has bequeathed to us an outstandingly vivid and accurate description of diabetes.

Key words: Aretaeus of Cappadocia, Diabetes, Galen, Soranus of Ephesus, Diarrhea urinosa, Dipsakon

INTRODUCTION

The first clear and complete description of diabetes was made by Aretaeus of Cappadocia, a famous physician of the late Hellenistic period. His analysis of diabetes represents, in fact, the only extensive text of Greek medical literature in existence. His medical writings are moreover unique in the history of ancient medicine for their precision and thoroughness, constituting as they do a creative synthesis of widely accepted ideas in ancient Greek medicine enhanced and augmented by the original conclusions drawn by Aretaeus by virtue of his singular capacity for observation of patients' symptoms.

ARETAEUS' LIFE AND WORK

Aretaeus, surnamed the Cappadocian, is probably the greatest physician of Greco-Roman antiquity after Hippocrates, and at least the equal of Galen. Born in Cappadocia, a region of eastern Asia Minor, he studied medicine in Alexandria and practiced in Rome.¹ Aretaeus belonged to the Eclectic School of Medicine (Greek: *Εκλεκτικοί*). Its members were so called because they selected from previous medical treatises those parts which they deemed most rational. The medical practice of Aretaeus was also based on the principles of the Pneumatic School, founded by Athenaeus of Cilicia in the 1st century AD, which believed in the vital role of both *pneuma* (air) and the qualitative characteristics of certain fundamental elements, known as the four humours (heat, coldness, moisture, dryness), in the causation of diseases.²
