Concepts of Modern Physics Arthur Beiser, Craig B. Watkins, 2002-04 Concepts of Modern Physics Arthur Beiser, 1987

Modern Physics is the most up to date accessible presentation of modern physics available The book is intended to be used in a one semester course covering modern physics for students who have already had basic physics and calculus courses The balance of the book leans more toward ideas than toward experimental methods and practical applications because the beginning student is better served by a conceptual framework than by a mass of details The sequence of topics follows a logical rather than strictly historical order Relativity and quantum ideas are considered first to provide a framework for understanding the physics of atoms and nuclei The theory of the atom is then developed and followed by a discussion of the properties of aggregates of atoms which includes a look at statistical mechanics Finally atomic nuclei and elementary particles are examined CIVIL SERVICES CHRONICLE JUNE 2020 ENGLISH MR. Abraham's Dice Karl W. Giberson, 2016-04-18 Most of us believe everything happens for a reason Whether it is God's will karma or fate we want to believe that nothing in the world especially disasters and tragedies is a random meaningless event But now as never before confident scientific assertions that the world embodies a profound contingency are challenging theological claims that God acts providentially in the world The random and meandering path of evolution is widely used as an argument that God did not create life Abraham's Dice explores the interplay between chance and providence in the monotheistic religious traditions looking at how their interaction has been conceptualized as our understanding of the workings of nature has changed This lively historical conversation has generated intense ongoing theological debates and provocative responses from science what are we to make of the history of our universe where chance and law have played out in complex ways Or the evolution of life where random mutations have challenged attempts to find purpose within evolution and convinced many that human beings are but a glorious accident The enduring belief that everything happens for a reason is examined through a conversation with major scholars among them holders of prestigious chairs at Oxford and Cambridge Universities and the University of Basel as well as several Gifford lecturers and two Templeton prize winners Organized historically Abraham's Dice provides a wide ranging scientific theological and biblical foundation to address the question of providence and divine action in a world shot through with contingency
