Our requirement for plant breeders to be successful has never been greater. However, one views the forecasted numbers for future population growth we will need in the immediate future to be feeding, clothing and housing many more people than we do inadequately at present. Plant breeding represents the most valuable strategy in increasing our productivity in a way that is sustainable and environmentally sensitive. Plant breeding can rightly be considered as one of the oldest multidisciplinary subjects that is known to humans. It was practised by people who first started to carry out a settled form of agriculture. The art as it must have been at that stage was applied without any formal underlying framework but achieved dramatic results as witnessed by the forms of cultivated plants we have today. We are now learning how to apply successfully the results of yet imperfect scientific knowledge. This knowledge is however rapidly developing, particularly in areas of tissue culture, biotechnology and molecular biology. Plant breeding's inherent multifaceted nature means that alongside obvious subject areas like genetics, we also need to consider areas such as statistics, physiology, plant pathology, entomology, biochemistry, weed science, quality seed characteristics, reproductive biology, trial design, selection and computing. It therefore seems apparent that modern plant breeders need to have a grasp of a wide range of scientific knowledge and expertise if they are successfully to exploit the techniques, protocols and strategies which are open to them.

**ESSENTIALS OF PLANT BREEDING.** K.V. MOHANAN, 2023      **Plant Breeding** Jack Brown, Peter Caligari, Hugo Campos, 2014-10-20

This book *Plant Breeding* has its bases in an earlier text entitled *An Introduction to Plant Breeding* by Jack Brown and Peter Caligari first published in 2008. The challenges facing today's plant breeders have never been more overwhelming yet the prospects to contribute significantly to global food security and farmers' quality of life have never been more exciting and fulfilling. Despite this, there has been a worrying decline in public funding for plant breeding related research and support for international centers of germplasm development and crop improvement. In part, this has resulted in a serious reduction in the number of young people interested in devoting their professional careers to plant breeding as well as the number of universities offering plant breeding courses or conducting relevant research in plant breeding. The authors' aim in writing this book is to provide an integrated and updated view of the current scientific progress related to diverse plant breeding disciplines within the context of applied breeding programs. This excellent new book will encourage a new generation of students to pursue careers related to plant breeding and will assist a wider audience of agricultural students, agronomists, policy makers and those with an interest in agriculture in gaining insight about the issues affecting plant breeding and its key role in improving the quality of life of people and in securing sufficient food at the quality required and at an affordable price. With comprehensive coverage including questions designed for students and an accompanying website containing additional material to help in the study of

the subject Plant Breeding is an ideal text for all those studying plant and crop sciences and a convenient reference source for professionals working in the area All libraries within universities and research establishments where biological and agricultural sciences are studied and taught should have multiple copies of this book
