Humble Book Bundle Data Science Presented By Oreilly:

Data Science from Scratch Joel Grus,2019-04-12 Data science libraries frameworks modules and toolkits are great for doing data science but they're also a good way to dive into the discipline without actually understanding data science. With this updated second edition you'll learn how many of the most fundamental data science tools and algorithms work by implementing them from scratch. If you have an aptitude for mathematics and some programming skills author Joel Grus will help you get comfortable with the math and statistics at the core of data science and with hacking skills you need to get started as a data scientist. Today's messy glut of data holds answers to questions no one's even thought to ask. This book provides you with the know-how to dig those answers out.

Einführung in Data Science Joel Grus,Kristian Rother,Thomas Demmig,2019

Data Science Management Marcel Hebing,Martin Schmidt,2023-11-30

Doing Data Science Cathy O'Neil,Rachel Schutt,2013-10-09

Now that people are aware that data can make the difference in an election or a business model data science as an occupation is gaining ground. But how can you get started working in a wide ranging interdisciplinary field that's so clouded in hype? This insightful book based on Columbia University's Introduction to Data Science class tells you what you need to know. In many of these chapter-long lectures, data scientists from companies such as Google, Microsoft, and eBay share new algorithms, methods, and models by presenting case studies and the code they use. If you're familiar with linear algebra, probability, and statistics, and have programming experience, this book is an ideal introduction to data science. Topics include statistical inference, exploratory data analysis, and the data science process. Algorithms Spam filters, Naive Bayes, and data wrangling. Logistic regression, Financial modeling, Recommendation engines, and causality. Data visualization, Social networks, and data journalism. Data engineering, MapReduce, Pregel, and Hadoop. Doing Data Science is a collaboration between course instructor Rachel Schutt, Senior VP of Data Science at News Corp, and data science consultant Cathy O'Neil, a senior data scientist at Johnson Research Labs who attended and blogged about the course.

Data Science: The Hard Parts Daniel Vaughan,2023-11 This practical guide provides a collection of techniques and best practices that are generally overlooked in most data engineering and data science pedagogy. A common misconception is that great data scientists are experts in the big themes of the discipline machine learning and programming. But most of the time these tools can only take us so far. In practice, the smaller tools and skills really separate a great data scientist from a not-so-great one. Taken as a whole, the lessons in this book make the difference between an average data scientist candidate and a qualified data scientist working in the field. Author Daniel Vaughan has collected, extended, and used these skills to create value and train data scientists from different companies and industries. With this book, you will understand how data science creates value, deliver compelling narratives to sell your data science project, build a business case using unit economics principles, create new features for a ML model using storytelling, learn how to decompose KPIs, perform growth decompositions to find root causes for changes in a metric. Daniel Vaughan is head of data at Clip, the leading paytech.
