

### Phobia

"A phobia is an intense fear of something that, in reality, poses little or no actual danger. Common phobias and fears include closed-in places, heights, highway driving, flying insects, snakes, and needles" (Phobias and Fears, 2011). "Anxiety and fear are normal responses to the perceived threat" (Pearlfoxy, 2005, p.2). However the perceived threats need not be the real ones always. Faye thoughts about unrealistic threats can be referred as phobias. Almost the entire people have some kind of phobias. In other words, everyone has some kind of irrational fear which is often labeled as phobias. For example, some people are afraid of rats whereas others are afraid of even cockroaches. In psychology, phobia is labeled as an anxiety disorder in which the patient may develop persistent fear or anxieties about an object or situation. Majority of the phobias develops during childhood and in some cases, it may carry throughout the entire life span of the person. This paper analyses various symptoms, causes and remedies or treatment options for phobias.

### Symptoms of phobias

Phobias can be classified into different categories such as; animal phobias, environment phobias, situational phobia, injury phobia etc. Even though phobias can be labeled as some kind of fears, all the fears are not phobias. For example, a person Experiencing butterflies when peering down from the top of a skyscraper or climbing a tall ladder cannot be labeled as phobia whereas Turning down a great job because it's on the 10th floor of the office building is definitely a kind of phobia (Phobias and Fears, 2011). In the first case, the person is facing fear

**The Fear Economy: A Theory of Output, Interest, and Safe Assets** Ruchir Agarwal, 2022-09-09 This paper presents a fear theory of the economy based on the interplay between fear of rare disasters and the interest rate on safe assets To do this I study the macroeconomic consequences of government administered interest rates in the neoclassical real business cycle model When the government has the power to fix the safe real interest rate the gap between the sticky real safe rate and the neutral rate can generate far reaching aggregate distortions When fear exogenously rises the demand for safe assets rise and the neutral rate falls If the central bank does not lower the safe rate by the same amount savings rise leading to a decline in consumption and aggregate demand The same mechanism works in reverse when fear falls Quantitatively I show that a single fear factor can simultaneously i generate cross correlations in output labor consumption and investment consistent with the postwar US economy and ii generates variation in equity prices bond prices and a large risk premium in line with the asset pricing data

Six novel insights emerge from the model 1 actively regulating the safe interest rate in both directions can mitigate the fluctuations generated by fear cycles 2 recessions will be deeper and longer when central banks accept the zero lower bound and are unwilling to use negative rates 3 a commitment to use negative rates in recessions even if never implemented raises both the short and long run real neutral rates and moderates the business cycle 4 counter cyclical fiscal policy can act as disaster insurance and be expansionary by reducing fear 5 quantitative easing can be narrowly effective only when fear is high at the lower bound and 6 when fear is high especially at the lower bound policies that boost productivity also help fight recessions

examines the growing use of risk assessment as it relates to preventive detention and supervision schemes for offenders perceived to be at a high risk of re offending individuals with severe mental illness and suspected terrorists It outlines a number of legislative regimes in common law countries that have broadened civil as opposed to criminal powers of detention and supervision Drawing on the disciplines of criminology and social psychology it explores how and why such schemes reflect a move towards curtailing liberty before harm results rather than after a crime has occurred Human rights and ethical issues concerning the role of mental health practitioners in assessing risk for the purposes of preventive detention and supervision are explored and regimes that require evidence from mental health practitioners are compared with those that rely on decision makers notions of reasonable belief concerning the risk of harm Case studies are used to exemplify some of the issues relating to how governments have attempted to manage the fear of future harm This book aims to educate mental health practitioners in the law relating to preventive detention and supervision schemes and how the legal requirements differ from clinical assessment practices examine the reasons why there has been a recent renewal of preventive detention and supervision schemes in common law countries provide a comparative overview of existing preventive detention and supervision schemes and analyse the human rights implications and the ethics of using forensic risk assessment techniques for preventive detention and supervision schemes

**Understanding and Treating Fear of Pain** Gordon

Asmundson,Johan Vlaeyen,Geert Crombez,2004-07-29 People who suffer from chronic pain are typically found to be more anxious and fearful of pain than those who do not Recent evidence has shown that the fear itself serves as a mechanism through which chronic pain is maintained over time Even once the muscle or tissue damage is healed a fear of further pain can lead to avoidance behaviour which over time leads to deconditioning e g decreased mobility weight gain This in turn leads to further pain experiences negative expectancies and strengthened avoidance It is the reciprocal relationship between fear and avoidance that is thought to be responsible for maintaining pain behaviour and disability With fear of pain known to cause significant suffering and functional disability there is a need for a greater understanding of this condition This is the first book to explore this topic It starts by introducing the current theoretical positions regarding pain related fear and anxiety along with relevant empirical findings It then provides comprehensive coverage of assessment issues and treatment strategies Finally the book suggests further areas for investigation Pain related fear and anxiety are now receiving considerable attention and efficient and effective treatments are fast becoming available This book will help guide and extend our understanding of a condition that has been shown to be associated with substantial suffering and disability

The College Fear Factor Rebecca D. Cox, 2009-10-30 They re not the students strolling across the bucolic liberal arts campuses where their grandfathers played football They are first generation college students children of immigrants and blue collar workers who know that their hopes for success hinge on a degree But college is expensive unfamiliar and intimidating Inexperienced students expect tough classes and demanding remote faculty They may not know what an assignment means what a score indicates or that a single grade is not a definitive measure of ability And they certainly don t feel entitled to be there They do not presume success and if they have a problem they don t expect to receive help or even a second chance Rebecca D Cox draws on five years of interviews and observations at community colleges She shows how students and their instructors misunderstand and ultimately fail one another despite good intentions Most memorably she describes how easily students can feel defeated by their real world responsibilities and by the demands of college and come to conclude that they just don t belong there after all Eye opening even for experienced faculty and administrators The College Fear Factor reveals how the traditional college culture can actually pose obstacles to students success and suggests strategies for effectively explaining academic expectations
