PROPOSAL TITLE	Examining the Impact of Technology Integration on Student Engagement and Learning Outcomes in Mathematics Education		

RESEARCH OBJECTIVE

This research project aims to investigate the influence of technology integration on student engagement and learning outcomes in mathematics education. Specifically, the study examines how using educational technology tools, such as interactive simulations and online platforms, can enhance student engagement, promote conceptual understanding, and improve overall learning outcomes in mathematics.

BACKGROUND AND RATIONALE

Research in mathematics education has shown the potential benefits of technology integration in promoting student engagement and achievement. However, there is a need for further investigation into the specific impact of various technology tools on student engagement and learning outcomes in mathematics education. This research project addresses this gap and provides evidence-based insights to inform instructional practices and enhance mathematics teaching and learning.

RESEARCH QUESTIONS

- How does integrating technology tools in mathematics education affect student engagement levels?
- To what extent does using technology tools enhance conceptual understanding and learning outcomes in mathematics?
- Are there any differential effects of specific technology tools on student engagement and learning outcomes in different areas of mathematics?

METHODS

This research will employ a mixed-methods approach. Quantitative data will be collected through pre-and post-tests to measure students' learning outcomes and engagement levels. Qualitative data will be gathered through classroom observations, student interviews, and reflective journals to gain insights into students' experiences and perceptions regarding technology integration. The research will be conducted in selected secondary schools, and a control experimental group design will be utilized to compare the outcomes of classrooms with and without technology integration.
