Once the Interactive opens, get acquainted with how it functions. Know how to Start, Pause, Step, and Reset the simulation. Observe the three different tabs at the top of the simulation for toggling between Ramp, Loop, and Bumps. Observe that each track design can be further modified by dragging a grey circle to a different position. Experiment with the three controls for showing the Velocity vector and Force vectors and toggling Track Drag on and off. Once acquainted with the program, select the Ramp button to reset the simulation to default settings and then perform the following studies:

Section 1: Basic Energy Relationships

I. Click/tap the Start button and observe the motion. View the bar charts and the velocity value as the coaster car moves. Complete the following paragraph by entering total mechanical energy (ME), kinetic energy (KE), and potential energy (PE). The labeled locations refer to the graphic at the right.

at point E.		

Section 2: Hill Design

Click/tap on the Bumps tab at the top of the Interactive. Then drag the grey circles to modify the track so that it looks like the track design at the right. Pay attention to the background grid to help with the design. Note that Dot G is at the same height as Dot E; make sure that the same is true of your final design.
