Rotary Smart Vehicle Parking (Rsvp) Baljinder Kaur,Krishna Kumar Jha,Shehbaz Juneja,2023-08-08 In metropolitan cities vehicle parking has become a major concern in all busy areas and a good traffic system needs a good parking system Different types of vehicle parking are applied worldwide namely Multi level Automated Car Parking Automated Car Parking System Volkswagen Car Parking etc The present project work is aimed to develop a reduced working model of a car parking system for parking 6 to 24 cars within a parking area of 32 17 m² The chain and sprocket mechanism are used for driving the parking platform and a one fourth hp brake motor shall be implemented for powering the system and indexing the platform The platform is fabricated to suit the working model The procurement and manufactured items are in hand and are ready to be assembled with the structure This model is further useful for different branches of engineering in order to develop different types of automations like PLC Micro controller and computerization etc By testing analyzing the working model we can defiantly get the view to develop the parking lots at difficult and busy commercial places The present project work is completed up to fabrication of different parts and the structure and is ready to be assembled The final assembly is going on and would be completed shortly

Automated Car Parking Management System using LabVIEW and IR Sensors Bandar Hezam,2023-12-05 Seminar paper from the year 2019 in the subject Engineering Computer Engineering grade A language English abstract This project introduces an automated and efficient solution for car parking management Utilizing LabVIEW s front panel and block diagram functionalities the system is specifically designed to automate the entry and exit processes in a car parking facility The incorporation of an LCD provides real time information on the total number of parked cars and available parking spaces The project employs a slide switch to detect vehicle entry and exit preventing further entries when the parking area reaches full capacity In such cases a NO SPACE FOR PARKING message is displayed on the LCD in red signaling that the parking facility is at maximum capacity The system ensures that the entrance gate remains closed if there is no available parking space Upon a vehicle leaving the park the controller updates the count and allows other vehicles to enter To address limitations of existing systems the proposed solution integrates IR sensors These sensors

not only determine the availability of parking slots but also allocate and de allocate them based on the presence of vehicles at entry and exit points This innovation eliminates the time consuming process of searching for an empty parking slot in a large area providing a more user friendly and efficient car parking management system The inclusion of LED indicators further enhances user experience by signaling the availability of parking spaces in real time with green indicating availability and red indicating occupancy
