Writing Fast Programs John S. Riley, 2006. Writing Fast Programs provides the basic elements of code optimization and provides strategies for reducing bottlenecks in practical simulation and numerical modeling code. The target audience is scientists and engineers and students in these fields. One pre-publication reviewer called this a much needed intermediate text to bridge the gap between existing introductory and more advanced programming books aimed at scientists. Writing Fast Programs does not teach basic programming; some programming proficiency is assumed along with familiarity with the basic programming terminology. Code examples are presented in C but BASIC as a convenient pseudo language. Examples are provided for those not familiar with C. In general, the strategies presented are not language specific and should therefore benefit a wide programming audience. For example, similar techniques have been discussed for Java.
