shows you the rules routines commands and protocols the glue that integrates individual microservices so they can function together in a safe scalable and reliable way Design and build individual microservices that can successfully interact on the open web Increase interoperability by designing services that share a common understanding Build client applications that can adapt to evolving services without breaking Create resilient and reliable microservices that support peer to peer interactions on the web Use web based service registries to support runtime find and bind operations that manage external dependencies in real time Implement stable workflows to accomplish complex multiservice tasks consistently
