Rigby,2013-02-21 From the earliest days of aviation where the pilot would drop simple bombs by hand to the highly agile stealthy aircraft of today that can deliver smart ordnance with extreme accuracy engineers have striven to develop the

capability to deliver weapons against targets reliably safely and with precision Aircraft Systems Integration of Air Launched Weapons introduces the various aspects of weapons integration primarily from the aircraft systems integration viewpoint but also considers key parts of the weapon and the desired interactions with the aircraft required for successful target engagement Key features Addresses the broad range of subjects that relate directly to the systems integration of air launched weapons with aircraft such as the integration process system and subsystem architectures the essential contribution that open international standards have on improving interoperability and reducing integration costs and timescales Describes the recent history of how industry and bodies such as NATO have driven the need for greater interoperability between weapons and aircraft and worked to reduce the cost and timescales associated with the systems integration of complex air launched weapons with aircraft Explores future initiatives and technologies relating to the reduction of systems integration costs and timescales The systems integration of air launched weapons with aircraft requires a multi disciplinary set of engineering capabilities As a typical weapons integration life cycle spans several years new engineers have to learn the skills required by on the job training and working with experienced weapons integrators Aircraft Systems Integration of Air Launched Weapons augments hands on experience thereby enabling the development of subject matter expertise more quickly and in a broader context than would be achieved by working through the life cycle on one specific project This book also serves as a useful revision source for experienced engineers in the field   Engineering Agile Big-Data Systems Kevin Feeney,Jim Davies,James Welch,2022-09-01 To be effective data intensive systems require extensive ongoing customisation to reflect changing user requirements organisational policies and the structure and interpretation of the data they hold Manual customisation is expensive time consuming and error prone In large complex systems the value of the data can be such that exhaustive testing is necessary before any new feature can be added to the existing design In most cases the precise details of requirements policies and data will change during the lifetime of the system forcing a choice between expensive modification and continued operation with an inefficient design Engineering Agile Big Data Systems outlines an approach to dealing with these problems in software and data engineering describing a methodology for aligning these processes throughout product lifecycles It discusses tools which can be used to achieve these goals and in a number of case studies shows how the tools and methodology have been used to improve a variety of academic and business systems
