Angus, 2015-06-15 Excerpt from The Theory of Machines The Principles of Mechanism Elementary Mechanics of Machines The present treatise dealing with the Principles of Mechanism and Mechanics of Machinery is the result of a number of years experience in teaching the subjects and in practising engineering and endeavors to deal with problems of fairly common occurrence It is intended to cover the needs of the beginner in the study of the Science of machinery and also to take up a number of the advanced problems in mechanics As the engineer uses the drafting board very freely in the solution of his problems the author has devised graphical Solutions throughout and only in a very few instances has he used formula involving anything more than elementary trigonometry and algebra The two or three cases involving the calculus may be

omitted without detracting much from the usefulness of the book The reader must remember that the book does not deal with machine design and as the drawings have been made for the Special purpose of illustrating the principles under discussion the mechanical details have frequently been omitted and in certain cases the proportions somewhat modified so as to make the constructions employed clearer The photograph or motion diagram has been introduced in Chapter IV and appeared in the first edition for the first time in print It has been very freely used throughout so that most of the Solutions are new and experience has shown that results are more easily obtained in this way than by the usual methods As the second part of the book is much more difficult than the first it is recommended that in teaching the subject most of the first part be given to students in the sophomore year all of the second part and possibly some of the first part being assigned in the junior year The thanks of the author are due to Mr J H Parkin for his careful work on governor problems some of which are incorporated and for assistance in proofreading also to the various firms and others who furnished cuts and information most of which is acknowledged in the body of the book About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

The cutting edge advances in this research field are nicely pictured in the chapters of this volume They come from world s leading laboratories engaged in the development of molecular machines and are authored by some of the most respected scientists in the field This volume shows on the one hand the level of ingenuity and technical capability reached in the construction of artificial nanomachines roughly two decades after their inception On the other hand it conveys the excitement about the enormous opportunities as well as the challenges this research area presents as the interest of researchers is shifting from ensemble to single molecule measurements and from homogeneous to heterogeneous environments Indeed as Feynman said when we have some control of the arrangement of things on a molecular scale we will get an enormously greater range of possible properties that substances can have Although the answer to the when question is not easy to find there is no doubt that artificial molecular machines and motors will lead to a wide variety of applications

which we cannot even envisage today The Nobel Prize in Chemistry 2016 was awarded jointly to Jean Pierre Sauvage Sir J Fraser Stoddart and Bernard L Feringa for the design and synthesis of molecular machines Both Jean Pierre Sauvage and Bernard L Feringa contributed to this volume The goal of each thematic volume in this series is to give the non specialist reader whether in academia or industry a comprehensive insight into an area where new research is emerging which is of interest to a larger scientific audience Each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years are presented using selected examples to illustrate the principles discussed The coverage is not intended to be an exhaustive summary of the field or include large quantities of data but should rather be conceptual concentrating on the methodological thinking that will allow the non specialist reader to understand the information presented Contributions also offer an outlook on potential future developments in the field Review articles for the individual volumes are invited by the volume editors Readership research chemists at universities or in industry graduate students
