Advanced Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamma, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above

The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control. However, the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken.

Sustainable Solutions for Environmental Pollution, Volume 1 Nour Shafik El-Gendy, 2021-09-20 SUSTAINABLE SOLUTIONS FOR ENVIRONMENTAL POLLUTION This first volume in a broad comprehensive two volume set Sustainable Solutions for Environmental Pollution concentrates on the role of waste management in solving pollution problems and the value added products that can be created out of waste turning a negative into an environmental and economic positive. Environmental pollution is one of the biggest problems facing our world today in every country, region and even down to local landfills. Not just solving these problems but turning waste into products even products that can make money is a huge game changer in the world of environmental engineering. biological waste treatment textbooks and reference books for advanced undergraduate and graduate students as well as for designers of waste treatment systems scientists and researchers An indispensable addition to the Humana Press series Volume 8 Biological Treatment Processes provides an illuminating look at water pollution control and the fascinating evolution of bio environmental engineering Effect of Algal Biofilm and Operational Conditions on Nitrogen Removal in Waste Stabilization Ponds Mohammed Babu, 2011-05-18 Discharge of nutrient rich wastewater causes eutrophication of surface water therefore wastewater treatment before discharge is required Wastewater stabilization ponds are low cost technology used by developing countries but not effective in nitrogen removal due to low nitrifier biomass in the water column Introduction of surface area for attachment of nitrifiers has therefore been proposed This thesis reports the performance of pilot scale wastewater stabilization ponds fitted with baffles The effect of baffles on nitrogen removal under tropical and two operational conditions was investigated Under TKN BOD ratio of 0.67 the baffled ponds performed better in nitrogen removal than the control pond Total nitrogen mass balances showed that nitrification denitrification algal uptake and sedimentation were principle nitrogen removal mechanisms in biofilm waste stabilization ponds This study shows the potential of biofilms in improving nitrogen removal in wastewater stabilization ponds The BOD and TSS concentrations were sufficiently low to permit for reuse in irrigation If the objective is reuse and optimization of resources the effluents from the ponds had sufficient nitrogen content for use in agriculture Biosolids Treatment Processes Lawrence K. Wang, Nazih K. Shammas, Yung-Tse Hung, 2007-11-17 The aim of Biosolids Treatment Processes is to cover entire environmental fields These include air and noise pollution control solid waste processing and resource recovery physicochemical treatment processes biological treatment processes biosolids management water resources natural control processes radioactive waste disposal and thermal pollution control It also aims to employ a multimedia approach to environmental pollution control **Water Pollution XI** C. A. Brebbia, 2012 Water pollution is by necessity an interdisciplinary field involving scientists and professionals with a wide range of expertise It also transcends national borders since the contamination of water resources is a problem of global concern The International Conference on Modelling Monitoring and Prevention of Water Pollution held biennially in different locations around the world has been providing a forum for the presentation and discussion of the latest developments in the field since 1991 The papers in this volume present some of the latest results in this important field work which is essential to understanding the nature of the problem and for proposing appropriate solutions which may eventually provide the guidelines required to take steps towards the remediation or recovery of water resources Water Pollution XI contains papers presented at the latest Eleventh Conference and includes the following topics Water quality Groundwater and aquifer issues Environmental monitoring and control Remediation Pollution prevention Lakes and rivers Agricultural contamination Wastewater treatment and management Offshore pollution and oil spills Emerging technologies Biosensors Health risk studies Nano particles Socio economic costs Biosystems Education and training Water in Mineral Processing

Jaroslav Drelich, Jiann-Yang Hwang, 2012 One of the major challenges confronting the mining and minerals processing industry in the 21st century will be managing in an environment of ever decreasing water resources. Because most mineral processing requires high water use, there will be even more urgency to develop and employ sustainable technologies that will reduce consumption and the discharge of process affected water. *Water in Mineral Processing* provides a comprehensive state of the art examination of this vital issue. A compilation of papers presented at the First International Symposium on Water in Mineral Processing, this book shares the insights of dozens of respected experts from industry and academia. A significant portion of the content is devoted to saline solutions and processing with sea water. Other chapters explore the latest in water treatment and biological methods, the effect of water quality on minerals processing and water and tailings management. *Water in Mineral Processing* is an authoritative first of its kind resource that can help mining practitioners apply innovative water use and purification technologies in the demanding years ahead.
