Friedman, Jeremy C. Wyatt, 2013-03-14 As director of a training program in medical informatics I have found that one of the

most frequent inquiries from graduate students is Although I am happy with my research focus and the work I have done how can I design and carry out a practical evaluation that proves the value of my contribution Informatics is a multifaceted interdisciplinary field with research that ranges from theoretical developments to projects that are highly applied and intended for near term use in clinical settings The implications of proving a research claim accordingly vary greatly depending on the details of an individual student s goals and thesis state ment Furthermore the dissertation work leading up to an evaluation plan is often so time consuming and arduous that attempting the perfect evaluation is frequently seen as impractical or as diverting students from central programming or implementation issues that are their primary areas of interest They often ask what compromises are possible so they can provide persuasive data in support of their claims without adding another two to three years to their graduate student life Our students clearly needed help in dealing more effectively with such dilemmas and it was therefore fortuitous when in the autumn of 1991 we welcomed two superb visiting professors to our laboratories Medical Informatics Edward Hance Shortliffe, Leslie E. Perreault, 1990 **Medical Informatics**
