

The Metric System: LAB ACTIVITY

Metric Measurement: VOLUME

Introduction: The volume of a cube can be calculated by multiplying its length times its width times its height. How could you figure out the volume of a rock that has broken and chipped edges? How could you figure out the volume of a bag of marbles without doing a lot of math?

Objective: In this activity, we will learn how to read the volume of a liquid in a graduated cylinder in millimeters (ml) by reading the meniscus of the liquid (see diagram below). When most liquids are placed in tall, narrow containers, they tend to creep up the walls of the container due to capillary action. This results in the surface of the liquid appearing to be curved. The bottom of this curve is known as the **MENISCUS**. In this activity, we will also learn how to measure the volume of oddly-shaped objects.

Practice: Measure the volume of the liquid in the graduated cylinder. Record below.

 36.5 ml

Procedure:

1. Record the names of the four objects in the table on the following page
2. Pour the liquid from your beaker at your lab station into the graduated cylinder. Make sure the level of the liquid is *between 50 ml and 70 ml*.
3. Ensure that you are at eye level with the level of water in the graduated cylinder. Read and record the number of milliliters (to the nearest tenth of a ml). Record this volume and in the "Beginning Volume" column for the first object.
4. Gently lower the first object into the liquid. Read the new volume and record in the "Volume of Liquid and Object" column for the first object. (The amount the water rises is equal to the volume of the object)
5. Calculate the volume of the object alone by subtracting the "Beginning Volume" from the "Volume of Liquid and Object". Record answer in the "Volume of Object" column for the first object.
6. Repeat steps 3 through 5 for the remaining three objects. (HINT: There is a shortcut that will allow your group to complete the data collection more quickly! See if your group can figure out the shortcut.)
