Pandemic Sonia Shah, 2016-02-16 Finalist for the Los Angeles Times Book Prize A New York Times Editor s Choice A grounded bracingly intelligent study Nature Prizewinning science journalist Sonia Shah presents a startling examination of the pandemics that have ravaged humanity and shows us how history can prepare us to confront the most serious acute global health emergency of our time Over the past fifty years more than three hundred infectious diseases have either

emerged or reemerged appearing in places where they've never before been seen. Years before the sudden arrival of COVID-19, ninety percent of epidemiologists predicted that one of them would cause a deadly pandemic sometime in the next two generations. It might be Ebola, avian flu, a drug-resistant superbug, or something completely new like the novel virus the world is confronting today. While it was impossible to predict the emergence of SARS-CoV-2, and it remains impossible to predict which pathogen will cause the next global outbreak, by unraveling the stories of pandemics past, we can begin to better understand our own future and to prepare for what it holds in store.

In *Pandemic Tracking: Contagions from Cholera to Ebola and Beyond*, Sonia Shah interweaves history, original reportage, and personal narrative to explore the origins of epidemics, drawing parallels between cholera, one of history's most deadly and disruptive pandemic-causing pathogens, and the new diseases that stalk humankind today. She tracks each stage of cholera's dramatic journey from its emergence in the South Asian hinterlands as a harmless microbe to its rapid dispersal across the nineteenth-century world, all the way to its latest beachhead in Haiti. Along the way, she reports on the pathogens now following in cholera's footsteps: from the MRSA bacterium that besieges her own family to the never-before-seen killers coming out of China's wet markets, the surgical wards of New Delhi, and the suburban backyards of the East Coast. Delving into the convoluted science, strange politics, and checkered history of one of the world's deadliest diseases, *Pandemic* is a work of epidemiological history like no other, with urgent lessons for our own time. Shah proves a disquieting Virgil, guiding us through the hells ruled by infectious diseases; the power of Shah's account lies in her ability to track simultaneously the multiple dimensions of the public health crises we are facing.

The Chicago Tribune [Plant Natural Products for Human Health](#) Chun-Tao Che, Hongjie Zhang, 2019-03-21

Plants have served mankind as an important source of foods and medicines. While we all consume plants and their products for nutritional support, a majority of the world population also rely on botanical remedies to meet their health needs, either as their own traditional medicine or as complementary and alternative medicine. From a pharmaceutical point of view, many compounds obtained from plant sources have long been known to possess bio-pharmacological activities, and historically, plants have yielded many important drugs for human use, from morphine discovered in the early nineteenth century to the more recent paclitaxel and artemisinin. Today, we are witnessing a global resurgence in interest and use of plant-based therapies, and botanical products and natural products remain an important and viable source of lead compounds in many drug discovery programs. This Special Issue on Plant Natural Products for Human Health compiles a series of scientific reports to demonstrate the medicinal potentials of plant natural products. It covers a range of disease targets such as diabetes, inflammation, cancer, neurological disease, cardiovascular disease, liver damage, bacterial and fungus infection, and malaria. These papers provide important insights into the current state of research on drug discovery and new techniques. It is hoped that this Special Issue will serve as a timely reference for researchers and scholars who are interested in the discovery of potentially useful molecules from plant sources for health-related applications.
