**Blind Massive MIMO Base Stations** Marcus Karlsson, 2018-08-15 Massive MIMO Multiple Input Multiple Output is a cellular network technology in which the base station is equipped with a large number of antennas and aims to serve several different users simultaneously on the same frequency resource through spatial multiplexing. This is made possible by employing efficient beamforming based on channel estimates acquired from uplink reference signals where the base station can transmit the signals in such a way that they add up constructively at the users and destructively elsewhere. The multiplexing together with the array gain from the beamforming can increase the spectral efficiency over contemporary systems. One challenge of practical importance is how to transmit data in the downlink when no channel state information is available. When a user initially joins the network prior to transmitting uplink reference signals that enable beamforming it needs system information instructions on how to properly function within the network. It is transmission of system information that is the main focus of this thesis. In particular the thesis analyzes how the reliability of the transmission of system information depends on the available amount of diversity. It is shown how downlink reference signals space time block codes and power allocation can be used to improve the reliability of this transmission. In order to estimate the uplink and downlink channels from uplink reference signals which is imperative to ensure scalability in the number of base station antennas massive MIMO relies on channel reciprocity. This thesis shows that the principles of channel reciprocity can also be exploited by a jammer a malicious transmitter aiming to disrupt legitimate communication between two single antenna devices. A heuristic scheme is proposed in which the jammer estimates the channel to a target device blindly without any knowledge of the transmitted legitimate signals and subsequently beamforms noise towards the target. Under the same power constraint the proposed jammer can disrupt the legitimate link more effectively than a conventional omnidirectional jammer in many cases. Massiv MIMO eng Multiple Input Multiple Output r en teknologi inom cellulär kommunikation som frutspridningen har en betydande roll i framtida kommunikationssystem på grund av de många fördelarna som denna teknologi medför. Massiv MIMO innebär att basstationen har ett stort antal antenner där varje antenn kan styras individuellt. De många antennerna gör att basstationen kan rikta de elektromagnetiska signalerna på ett sådant sätt att de förstärks på positioner där användarna befinner sig men släcks ut i övrigt. Detta i sin tur innebär att flera användare kan betjänas samtidigt på samma frekvensband utan att de stör varandra. Detta medför att massiv MIMO kan erbjuda en hög dataakt i nutida cellulära kommunikationssystem. För att kunna rikta signalerna på ett effektivt sätt måste basstationen kunnat tillgå kanalen eller utbredningsmiljön mellan sig själv och de användare som betjänas. När en användare precis kommer in i systemet vet basstationen inte var användaren befinner sig men måste likväl tillgodose användaren med information om hur systemet fungerar. Nu måste alltså basstationen kommunicera med användaren utan möjligheten att kunna rikta signalen på ett effektivt sätt. Det är detta problem som vi i huvudsak studerar i denna avhandling hur man kan utnyttja de många antennerna på

basstationen för att skicka information till användarna utan någon kanalknäddom. Vi studerar även hur en grupp antenner med många antenner baserad på samma teknologi som massiv MIMO kan användas som en storsändare. Storsändarens mål är att hindra kommunikationen mellan tv-enheter på ett effektivt sätt. En storsändare med ett stort antal antenner kan utan någon kanalknäddom av vad de tv-enheterna skickar i många fall prestera bättre än en konventionell storsändare på grund av att storsignalen kan riktas mot en specifik enhet.

*Building Enterprise IoT Applications* Chandrasekar Vuppalapati, 2019-12-12 McKinsey Global Institute predicts Internet of Things IoT could generate up to 11.1 trillion a year in economic value by 2025. Gartner Research Company expects 20 billion interconnected devices by 2020 and as per Gartner the IoT will have a significant impact on the economy by transforming many enterprises into digital businesses and facilitating new business models improving efficiency and increasing employee and customer engagement. It is clear from above and our research that the IoT is a game changer and will have huge positive impact in foreseeable future. In order to harvest the benefits of IoT revolution the traditional software development paradigms must be fully upgraded. The mission of our book is to prepare current and future software engineering teams with the skills and tools to fully utilize IoT capabilities. The book introduces essential IoT concepts from the perspectives of full scale software development with the emphasis on creating niche blue ocean products. It also outlines a fundamental full stack architecture for IoT. Describes various development technologies in each IoT layer. Explains IoT solution development from Product management perspective. Extensively covers security and applicable threat models as part of IoT stack. The book provides details of several IoT reference architectures with emphasis on data integration edge analytics cluster architectures and closed loop responses.

**The Internet of Everything** Nilanjan Dey, Gitanjali Shinde, Parikshit Mahalle, Henning Olesen, 2019-08-05 In the era before IoT the world wide web internet web 2.0 and social media made people's lives comfortable by providing web services and enabling access personal data irrespective of their location. Further to save time and improve efficiency there is a need for machine to machine communication automation smart computing and ubiquitous access to personal devices. This need gave birth to the phenomenon of Internet of Things IoT and further to the concept of Internet of Everything IoE. This book aims to present different aspects of IoE challenges faced by IoE and its applications divided into 8 chapters. This multifaceted coverage of the various verticals and IoT layers is the main attraction of this book.
