Decision-Making in Engineering Design Yotaro Hatamura,2006-06-01 This book is a sequel to The Practice of Machine Design and The Practice of Machine Design Book 3 Learning from Failure It deals with what happens inside the human mind during such activities as design and production and how we reach decisions Unlike other regular machine design textbooks or handbooks that describe how to accomplish good designs the present volume explains what the designer thinks when making design decisions A design starts with a vague concept and gradually takes shapes as it proceeds and during this process the mind extracts elements and makes selections and decisions the results expressed in sketches drawings or sentences This book aims at exposing the reader to the processes of element extraction selection and decision making through real life examples Such a book has never been published before An explicit description of the processes of making decisions on the contrary has been greatly needed by designers and the managers of design groups have been much aware of such a lack The non existence of this type of book in the past is due to the following three reasons the benefit of describing the mind process of design was never made clear the method of such clarification was unknown and no one ever invested the vast energy for producing such a manifestation Under these circumstances we the members of the Practice of Machine Design Research Group boldly tackled the problem of expressing the decision processes in design and have documented our findings in this book

Mini-Grids for Rural Electrification of Developing Countries Subhes C. Bhattacharyya,Debajit Palit,2014-05-31 In recognition of the fact that billions of people in the developing world do not have access to clean energies the United Nations launched the Sustainable Energy for All Initiative to achieve universal energy access by 2030 Although electricity grid extension remains the most prevalent way of providing access it is now recognized that the central grid is unlikely to reach many remote areas in the near future At the same time individual solutions like solar home systems tend to provide very limited services to consumers Mini grids offer an alternative by combining the benefits of a grid based solution with the potential for harnessing renewable energies at the local level The purpose of this book is to provide in depth coverage of the use of mini grids for rural electrification in developing countries taking into account the technical economic environmental and governance dimensions and presenting case studies from South Asia This book reports on research carried out by a consortium of British and Indian researchers on off grid electrification in South Asia It provides state of the art technical knowledge on mini grids and micro grids including renewable energy integration or green mini grids smart systems for integration with the central grid and standardization of systems It also presents essential analytical frameworks and approaches that can be used to analyze the mini grids comprehensively including their techno economic aspects financial

viability and regulatory issues The case studies drawn from South Asia demonstrate the application of the framework and showcase various successful efforts to promote mini grids in the region It also reports on the design and implementation of a demonstration project carried out by the team in a cluster of villages in Odisha India The book s multi disciplinary approach facilitates understanding of the relevant practical dimensions of mini grid systems such as demand creation through interventions in livelihood generation and value chain development financing regulation and smart system design Its state of the art knowledge integrated methodological framework simulation exercises and real life case analysis will allow the reader to analyze and appreciate the mini grid related activities in their entirety The book will be of interest to researchers graduate students practitioners and policy makers working in the area of rural electrification in developing countries

China's Future Nuclear Submarine Force Lyle J Goldstein, Andrew S. Erickson, William S. Murray, Andrew Wilson, 2012-04-30 One of the key concerns of naval strategists and planners today is the nature of the Chinese geostrategic challenge Conceding that no one can know for certain China's intentions in terms of future conflict the editors of this hot topic book argue that the trajectory of Chinese nuclear propulsion for submarines may be one of the best single indicators of China's ambitions of global military power Nuclear submarines with their unparalleled survivability remain ideal platforms for persistent operations in far flung sea areas and offer an efficient means for China to project power This collection of essays presents the latest thinking of leading experts on the emergence of a modern nuclear submarine fleet in China Each contribution is packed with authoritative data and cogent analysis The book has been compiled by four professors and analysts at the U S Naval War College who are co founders of the college's recently established China Maritime Studies Institute Given the opaque nature of China's undersea warfare development readers will benefit from this penetrating investigation that considers the potential impact of even the most revolutionary changes in Chinese nuclear submarine capabilities The editors believe that to ignore such possibilities would be the height of strategic folly and represent inexcusable negligence in terms of U S national defense Anyone who is interested in the future of the U S Navy and the defense of the United States will find this book to be essential reading

The Senkaku Paradox Michael E. O'Hanlon, 2019-04-30 America needs better options for resolving potential crises In recent years the Pentagon has elevated its concerns about Russia and China as potential military threats to the United States and its allies But what issues could provoke actual conflict between the United States and either country And how could such a conflict be contained before it took the world to the brink of thermonuclear catastrophe as was feared during the cold war Defense expert Michael O'Hanlon wrestles with these questions in this insightful book setting them within the broader context of hegemonic change and today's version of great power competition The book examines how a local crisis could escalate into a broader and much more dangerous threat to peace What if for example Russia's little green men seized control of a community like Narva or an

even smaller town in Estonia now a NATO ally Or what if China seized one of the uninhabited Senkaku islands now claimed and administered by Japan or imposed a partial blockade of Taiwan Such threats are not necessarily imminent but they are far from inconceivable Washington could be forced to choose in these and similar cases between risking major war to reverse the aggression and appeasing China or Russia in ways that could jeopardize the broader global order O Hanlon argues that the United States needs a better range of options for dealing with such risks to peace He advocates integrated deterrence which combines military elements with economic warfare The military components would feature strengthened forward defenses as well as possibly limited military options against Russian or Chinese assets in other theaters Economic warfare would include offensive elements notably sanctions as well as measures to ensure the resilience of the United States and allies against possible enemy reprisal The goal is to deter war through a credible set of responses that are more commensurate than existing policy with the stakes involved in such scenarios The Examiner ,1853 Gardening Illustrated ,1899 **International Aerospace Abstracts** ,1999 *Makers* Bob Parks,2006-01-10 Make magazine launched in February 2005 as the first magazine devoted to Tech DIY projects hardware hacks and DIY inspiration has been hailed as a how to guide for the opposable thumb set and Popular Mechanics for the modern age Itching to build a cockroach controlled robot a portable satellite radio or your very own backyard monorail Hankering to hack a game boy or your circadian rhythms Rather read about people who fashion laptop bags from recycled wetsuits and build shopping cart go karts Make is required reading Now following on the heels of Make s wildly popular inaugural issues O Reilly offers Makers a beautiful hardbound book celebrating creativity resourcefulness and the DIY spirit Author Bob Parks profiles 100 people and their homebrew projects people who make ingenious things in their backyards basements and garages with a lot of imagination and a little applied skill Makers features technologies old and new used in service of the serious and the amusing the practical and the outrageous The makers profiled are driven by a combination of curiosity passion and plain old stick to itiveness to create the unique and astonishing Most are simply hobbyists who ll never gain notoriety for their work but that s not what motivates them to tinker The collection explores both the projects and the characters behind them and includes full color photographs and instructions to inspire weekend hackers Parks is just the man to track the quirky and outlandish in their natural maker habitats A well known journalist and author who covers the personalities behind the latest technologies Parks articles on innovations of all kinds have appeared in Wired Outside Business 2 0 and Make He has contributed essays to All Things Considered on public radio and discussed trends in technology devices with Regis Philbin and Russ Mitchell on television As a Wired editor Parks directed coverage of new consumer technologies and contributed feature articles All those who love to tinker or who fancy themselves kindred DIY spirits will appreciate Parks eclectic and intriguing collection of independent thinkers and makers
