**Content-based Retrieval of Medical Images** Paulo Mazzoncini de Azevedo-Marques, Rangaraj Rangayyan, 2022-06-01 Content based image retrieval CBIR is the process of retrieval of images from a database that are similar to a query image using measures derived from the images themselves rather than relying on accompanying text or annotation To achieve CBIR the contents of the images need to be characterized by quantitative features the features of the query image are compared with the features of each image in the database and images having high similarity with respect to the query image are retrieved and displayed CBIR of medical images is a useful tool and could provide radiologists with assistance in the form of a display of relevant past cases One of the challenging aspects of CBIR is to extract features from the images to represent their visual diagnostic or application specific information content In this book methods are presented for preprocessing segmentation landmarking feature extraction and indexing of mammograms for CBIR The preprocessing steps include

anisotropic diffusion and the Wiener filter to remove noise and perform image enhancement Techniques are described for segmentation of the breast and fibroglandular disk including maximum entropy a moment preserving method and Otsu s method Image processing techniques are described for automatic detection of the nipple and the edge of the pectoral muscle via analysis in the Radon domain By using the nipple and the pectoral muscle as landmarks mammograms are divided into their internal external upper and lower parts for further analysis Methods are presented for feature extraction using texture analysis shape analysis granulometric analysis moments and statistical measures The CBIR system presented provides options for retrieval using the Kohonen self organizing map and the k nearest neighbor method Methods are described for inclusion of expert knowledge to reduce the semantic gap in CBIR including the query point movement method for relevance feedback Rfb Analysis of performance is described in terms of precision recall and relevance weighted precision of retrieval Results of application to a clinical database of mammograms are presented including the input of expert radiologists into the CBIR and Rfb processes Models are presented for integration of CBIR and computer aided diagnosis CAD with a picture archival and communication system PACS for efficient workflow in a hospital Table of Contents Introduction to Content based Image Retrieval Mammography and CAD of Breast Cancer Segmentation and Landmarking of Mammograms Feature Extraction and Indexing of Mammograms Content based Retrieval of Mammograms Integration of CBIR and CAD into Radiological Workflow

**Mammograms of Interval Cancer** Shantanu Banik, Rangaraj Rangayyan, J.E. Leo Desautels, 2022-05-31 Architectural distortion is an important and early sign of breast cancer but because of its subtlety it is a common cause of false negative findings on screening mammograms Screening mammograms obtained prior to the detection of cancer could contain subtle signs of early stages of breast cancer in particular architectural distortion This book presents image processing and pattern recognition techniques to detect architectural distortion in prior mammograms of interval cancer cases The methods are

based upon Gabor filters phase portrait analysis procedures for the analysis of the angular spread of power fractal analysis Laws texture energy measures derived from geometrically transformed regions of interest ROIs and Haralick's texture features With Gabor filters and phase portrait analysis 4 224 ROIs were automatically obtained from 106 prior mammograms of 56 interval cancer cases including 301 true positive ROIs related to architectural distortion and from 52 mammograms of 13 normal cases For each ROI the fractal dimension the entropy of the angular spread of power 10 Laws texture energy measures and Haralick's 14 texture features were computed The areas under the receiver operating characteristic ROC curves obtained using the features selected by stepwise logistic regression and the leave one image out method are 0.77 with the Bayesian classifier 0.76 with Fisher linear discriminant analysis and 0.79 with a neural network classifier Free response ROC analysis indicated sensitivities of 0.80 and 0.90 at 5.7 and 8.8 false positives FPs per image respectively with the Bayesian classifier and the leave one image out method The present study has demonstrated the ability to detect early signs of breast cancer 15 months ahead of the time of clinical diagnosis on the average for interval cancer cases with a sensitivity of 0.8 at 5.7 FP image The presented computer aided detection techniques dedicated to accurate detection and localization of architectural distortion could lead to efficient detection of early and subtle signs of breast cancer at pre mass formation stages

**Fractal Analysis of Breast Masses in Mammograms** Thanh M. Cabral, Rangaraj M. Rangayyan, 2022-06-01 Fractal analysis is useful in digital image processing for the characterization of shape roughness and gray scale texture or complexity Breast masses present shape and gray scale characteristics in mammograms that vary between benign masses and malignant tumors This book demonstrates the use of fractal analysis to classify breast masses as benign masses or malignant tumors based on the irregularity exhibited in their contours and the gray scale variability exhibited in their mammographic images A few different approaches are described to estimate the fractal dimension FD of the contour of a mass including the ruler method box counting method and the power spectral analysis PSA method Procedures are also described for the estimation of the FD of the gray scale image of a mass using the blanket method and the PSA method To facilitate comparative analysis of FD as a feature for pattern classification of breast masses several other shape features and texture measures are described in the book The shape features described include compactness spiculation index fractional concavity and Fourier factor The texture measures described are statistical measures derived from the gray level cooccurrence matrix of the given image Texture measures reveal properties about the spatial distribution of the gray levels in the given image therefore the performance of texture measures may be dependent on the resolution of the image For this reason an analysis of the effect of spatial resolution or pixel size on texture measures in the classification

of breast masses is presented in the book The results demonstrated in the book indicate that fractal analysis is more suitable for characterization of the shape than the gray level variations of breast masses with area under the receiver operating characteristics of up to 0.93 with a dataset of 111 mammographic images of masses The methods and results presented in the book are useful for computer aided diagnosis of breast cancer Table of Contents Computer Aided Diagnosis of Breast Cancer Detection and Analysis of newline Breast Masses Datasets of Images of Breast Masses Methods for Fractal Analysis Pattern Classification Results of Classification of Breast Masses Concluding Remarks **Medical Equipment**
