Situational Method Engineering: Fundamentals and Experiences Jolita Ralyté, Sjaak Brinkkemper, Brian Henderson-Sellers, 2007-12-31 This proceedings volume contains the papers of the scientific program of the IFIP Working Group 8.1 working conference on Situational Method Engineering Fundamentals and Experiences. The conference has been held from 12 to 14 September 2007 at the University of Geneva in Switzerland. Since the early 1980s the IFIP WG8.1 working conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of information systems development methods. After two successful Method Engineering conferences in Atlanta in 1996 and in Kanazawa in 2002 it is now time again to provide a forum for the exchange of ideas in and give a state of the art overview in Method Engineering. The conference programme features three invited keynote presentations, paper presentations and one interactive panel session. Besides tutorials have been arranged to learn about the basics of Method Engineering. The format of a working conference allows for extensive paper discussions featured by discussant reviews in plenary sessions. Over the last decade Method Engineering defined as the engineering discipline to design, construct and adapt methods including supportive tools has emerged as the research and application area for using methods for systems development.

Information Systems Development Olegas Vasilecas, Albertas Caplinskas, Gregory Wojtkowski, Wita Wojtkowski, Jože Zupancic, Stanislaw Wrycza, 2006-02-08 This volume is comprised of the proceedings of the 13th International Conference on Information Systems Development held August 26th-28th 2004 at Vilnius Gediminas Technical University Vilnius Lithuania. The aim of this volume is to provide a forum for the research and practices addressing current issues associated with Information Systems Development (ISD). Every day new technologies, applications and methods raise the standards for the quality of systems expected by organizations as well as end users. All are becoming dependent on systems reliability, scalability and performance. Thus it is crucial to exchange ideas and experiences and to stimulate exploration of new solutions. This proceedings provides a forum for both technical and organizational issues.

Critical Systems: Formal Methods and Automated Verification Maurice H. ter Beek, Stefania Gnesi, Alexander Knapp, 2016-09-12 This book constitutes the refereed proceedings of the Joint 21st International Workshop on Formal Methods for Industrial Critical Systems and the 16th International Workshop on Automated Verification of Critical Systems FMICS AVoCS 2016 held in Pisa, Italy in September 2016. The 11 full papers and 4 short papers presented together with one invited talk were carefully reviewed and selected from 24 submissions. They are organized in the following sections: automated verification techniques, model-based system analysis and applications, and case studies.

both theoretical analysis and practical modelling of concurrent systems The main reason for the success of this class of net models is that they make it possible to obtain much more succinct and manageable descriptions than can be obtained by means of low level Petri nets while on the other hand they still offer a wide range of analysis methods and tools The step from low level nets to high level nets can be compared to the step from assembly languages to modern programming languages with an elaborated type concept In low level nets there is only one kind of token and this means that the state of a place is described by an integer and in many cases even by a boolean value In high level nets each token can carry complex information which e g may describe the entire state of a process or a data base Today most practical applications of Petri nets use one of the different kinds of high level nets A considerable body of knowledge exists about high level Petri nets this includes theoretical foundations analysis methods and many applications Unfortunately the papers on high level Petri nets have been scattered throughout various journals and collections As a result much of this knowledge is not readily available to people who may be interested in using high level nets
