Berger, 2013-06-28 Mapping uncharted territory in the study of liturgy's past this book offers a history to contemporary questions around gender and liturgical life Teresa Berger looks at liturgy's past through the lens of gender history understood as attending not only to the historically prominent binary of men and women but to all gender identities including intersexed persons ascetic virgins eunuchs and priestly men Demonstrating what a gender attentive inquiry is able to achieve Berger explores both traditional fundamentals such as liturgical space and eucharistic practice and also new ways of studying the past for example by asking about the developing link between liturgical presiding and priestly masculinity Drawing on historical case studies and focusing particularly on the early centuries of Christian worship this book ultimately aims at the present by lifting a veil on liturgy's past to allow for a richly diverse notion of gender differences as these continue to shape liturgical life

**The Origins of Human Diet and Medicine** Timothy Johns, 1996-01-01 People have always been attracted to foods rich in calories fat and protein yet the biblical admonition that meat be eaten with bitter herbs suggests that unpalatable plants play an important role in our diet So called primitive peoples show a surprisingly sophisticated understanding of how their bodies interact with plant chemicals which may allow us to rediscover the origins of diet by retracing the paths of biology and culture The domestication of the potato serves as the focus of Timothy Johns's interdisciplinary study which forges a bold synthesis of ethnobotany and chemical ecology The Aymara of highland Bolivia have long used varieties of potato containing potentially toxic levels of glycoalkaloids and Johns proposes that such plants can be eaten without harm owing to human genetic modification and cultural manipulation Drawing on additional fieldwork in Africa he considers the evolution of the human use of plants the ways in which humans obtain foods from among the myriad poisonous and unpalatable plants in the environment and the consequences of this history for understanding the basis of the human diet A natural corollary to his investigation is the origin of medicine since the properties of plants that make them unpalatable and toxic are the same properties that make them useful pharmacologically As our species has adapted to the use of plants plants have become an essential part of our internal ecology Recovering the ancient wisdom regarding our interaction with the environment preserves a fundamental part of our human heritage
