**Thinking Practice Questions**

1. As a field researcher you are sent to the Arizona desert to study the prairie dog species *C. ludovicianus* to determine if the population is in Hardy-Weinberg equilibrium. Specifically, you are studying this population with respect to the gene that determines the coat color in *C. ludovicianus*. This trait is coded for by a single gene (the NDY6 gene) with two alleles (N, n) and is passed down from one generation to the next. After sampling 170 of these prairie dogs, you find that 36% of the *C. ludovicianus* population is homozygous recessive for coat color. Assuming that the population is in Hardy-Weinberg equilibrium...

a. What is the allele frequency of the N allele?

$$q^2 = 0.36 \rightarrow q = 0.6 \dots p + q = 1 \text{ so } p = 0.4$$

b. What is the frequency of homozygous dominant prairie dogs?

$$p^2 = (0.4)^2 = 0.16$$

c. What is the frequency of heterozygous prairie dogs?

$$2pq = 2(0.4)(0.6) = 0.48$$

d. What conditions must be being satisfied for this population to be in HW equilibrium?

No natural selection, no sexual selection (random mating), no gene flow, no genetic drift, no mutation

2. Sixty flowering plants are planted in a flowerbed. Forty of the plants are red-flowering homozygous dominant. Twenty of the plants are white-flowering homozygous recessive. The plants naturally pollinate and reseed themselves for several years. In a subsequent year, 178 red-flowered plants, 190 pink-flowered plants, and 52 white-flowered plants are found in the flowerbed. Use a chi-square analysis to determine if the population is in Hardy-Weinberg equilibrium.

Total initial population size = 60

$$q^2 = 20/60 = 1/3 \rightarrow q = 0.577 \rightarrow p = 0.423$$

$$p^2 = 0.179$$

$$2pq = 2(0.423)(0.577) = 0.488$$

With a final population size of 420 (178+190+52), if the population is in HW equilibrium, the following values are expected (e)

$$\text{Red flowered plants} = 0.179 \times 420 = 75$$

$$\text{Pink flowered plants} = 0.488 \times 420 = 205$$

$$\text{White flowered plants} = 0.333 \times 420 = 140$$

**Chi square analysis**

Null Hypothesis : The observed values for red-flowered plants, pink-flowered plants, and white-flowered plants are not significantly different from the expected values predicted by HW equilibrium.

Phenotype	O	e	$(O-e)^2 / e$
Red	178	75	141
Pink	190	205	1
White	52	140	313
		Sum = $\chi^2$	455

Carlson, 2011-04-15 Essential reading for anyone who wishes to understand the current state of biotechnology and the opportunities and dangers it may create. American Scientist. Technology is a process and a body of knowledge as much as a collection of artifacts. Biology is no different and we are just beginning to comprehend the challenges inherent in the next stage of biology as a human technology. It is this critical moment with its wide ranging implications that Robert Carlson considers in *Biology Is Technology*. He offers a uniquely informed perspective on the endeavors that contribute to current progress in this area: the science of biological systems and the technology used to manipulate them. In a number of case studies Carlson demonstrates that the development of new mathematical, computational and laboratory tools will facilitate the engineering of biological artifacts up to and including organisms and ecosystems. Exploring how this will happen with reference to past technological advances he explains how objects are constructed virtually tested using sophisticated mathematical models and finally constructed in the real world. Such rapid increases in the power, availability and application of biotechnology raise obvious questions about who gets to use it and to what end. Carlson's thoughtful analysis offers rare insight into our choices about how to develop biological technologies and how these choices will determine the pace and effectiveness of innovation as a public good. Modeling Differential Equations in Biology Clifford Henry Taubes, 2008-01-17 Based on a very successful one semester course taught at Harvard this text teaches students in the life sciences how to use differential equations to help their research. It needs only a semester's background in calculus. Ideas from linear algebra and partial differential equations that are most useful to the life sciences are introduced as needed and in the context of life science applications are drawn from real published papers. It also teaches students how to recognize when differential equations can help focus research. A course taught with this book can replace the standard course in multivariable calculus.

**Optimization** Kenneth Lange, 2013-03-19 Finite dimensional optimization problems occur throughout the mathematical sciences. The majority of these problems cannot be solved analytically. This introduction to optimization attempts to strike a balance between presentation of mathematical theory and development of numerical algorithms. Building on students' skills in calculus and linear algebra, the text provides a rigorous exposition without undue abstraction. Its stress on statistical applications will be especially appealing to graduate students of statistics and biostatistics. The intended audience also includes students in applied mathematics, computational biology, computer science, economics, and physics who want to see rigorous mathematics combined with real applications. In this second edition, the emphasis remains on finite dimensional optimization. New material has been added on the MM algorithm, block descent and ascent, and the calculus of variations. Convex calculus is now treated in much greater depth. Advanced topics such as the Fenchel conjugate, subdifferentials, duality, feasibility, alternating projections, projected gradient methods, exact penalty methods, and Bregman iteration will equip students with the essentials for understanding modern data mining techniques in high dimensions. *Data Mining in Biomedicine Using Ontologies* Mihail Popescu, Dong Xu, 2009 Presently a growing number of ontologies are being built and used for annotating data in biomedical research. Thanks to the tremendous amount of data being generated, ontologies are now being used in numerous ways, including connecting different databases, refining search capabilities, interpreting experimental clinical data, and inferring knowledge. This cutting edge resource introduces you to latest developments in bio ontologies. The book provides you with the theoretical foundations and examples of ontologies, as well as applications of ontologies in biomedicine, from molecular levels to clinical levels. You also find details on technological infrastructure for bio ontologies. This comprehensive one stop volume presents a wide range of practical bio ontology information, offering you detailed guidance in the clustering of biological data, protein classification, gene and pathway prediction, and text mining. More than 160 illustrations support key topics throughout the book. *Advanced Chemical Biology* Howard C. Hang, Matthew R. Pratt, Jennifer A. Prescher, 2023-02-06 *Advanced Chemical Biology* The modern approach to teaching chemical biology. *Advanced Chemical Biology* is organized around the central dogma of life, progressing from genes to proteins and higher order cellular structures, including core application areas such as imaging, chemical genetics, activity based protein profiling, and natural product discovery, and biosynthesis. Advanced topics and applications in e.g. microbiology, developmental biology, and neurobiology are covered in separate sections. Every chapter is homogeneous in style and layout, consisting of a short historical introduction followed by a description of the underlying concepts and a selection of recent examples of how the concept has been turned into practice. The subdivision of the contents into core and supplemental chapters enables a flexible use in teaching, both for a one semester and a two semester course. Written by authors and editors coming from the leading scientific institutions that have developed the concepts and technologies for this discipline, *Advanced Chemical Biology* includes specific information on topics like DNA function, synthesis, and engineering chemical approaches to

genome integrity and RNA function synthesis and probing Chemical approaches to transcription and RNA regulation in vivo chemical biology of genome engineering and peptide protein synthesis and engineering Directed evolution for chemical biology chemical biology of cellular metabolism chemical biology of lipids and protein post translational modifications Chemical glycobiology chemical and enzymatic modification of proteins genetic code expansion bio orthogonal chemistry and cellular imaging With its broad scope and focus on turning concepts into applications Advanced Chemical Biology is an excellent starting point for anyone entering the field and looking for a guide to the wide range of available methods and strategies that chemical biology has to offer With a Foreword by Nobel Laureate Carolyn Bertozzi      **Resources in**
