Nonimaging Fresnel Lenses Ralf Leutz, Akio Suzuki, 2012-12-06 Nonimaging Fresnel Lenses Design and Performance of Solar Concentrators what are we talking about It is easy to forget that you dear reader may not be one of those who work in exactly the same field as we do nonimaging optics for the concentration of sunlight You may be a researcher in some optical science interested in the core subject of this book the world's first practical design of a nonimaging Fresnel lens concentrator You may not be too excited about the collection of solar energy but you would want a full description of the optical performance of the lens Which you will get mostly in terms of nonimaging optics complete with test results and set against the competition of imaging Fresnel lenses and mirror based imaging and nonimaging concentrators If you are a solar energy professional you are likely to be interested in reading why nonimaging optics and solar energy collection go together so well They do so because the concentration of solar energy does not demand imaging qualities but instead requires flexible designs of highly uniform flux concentrators coping with solar disk size solar spectrum and tracking errors Nonimaging optics has been developed to perfection since its discovery in 1965 in dealing with solar power conversion Much of this experience is useful in nonimaging optical design in other fields where the markets already are more rewarding than in solar power generation such as optoelectronics

Light, heat and sound in Robert Grosseteste's Physics Amelia Carolina Sparavigna, 2016-11-28 Robert Grosseteste was one of the most prominent thinkers of the Thirteenth Century Philosopher and scientist he was Bishop of Lincoln from 1235 to 1253 He was heavily influenced by Augustine whose thought permeates his writings but he also made extensive use of the thought of Aristotle Avicenna and Averroes Grosseteste's physics is the science of Nature of which we will discuss in this book This science is quite different from the Galilean physics However in the scientific treatises written by Grosseteste we find some features preparing the born of the new physics that produced the Galilean revolution and the Newtonian mechanics This is the reason why Robert Grosseteste English statesman philosopher and scientist is defined by Alistair Cameron Crombie as the real founder of the tradition of the scientific thought in Oxford In this book we will propose a discussion of this Grosseteste's physics in particular that which is described in his treatises on light heat and sound *The Encyclopedia of Associations and Information Sources for Architects, Designers, and Engineers*, Lighting Design Christopher Cuttle, 2015-03-05 By reading this book you will develop the skills to perceive a space and its contents in light and be able to devise a layout of luminaires that will provide that lit appearance Written by renowned lighting expert Christopher Kit Cuttle the book explains the difference between vision and perception which is the distinction between providing lighting to make things visible and providing it to influence the appearance of everything that is visible demonstrates how lighting patterns generated by three dimensional objects interacting with directional lighting are strongly influential upon how the visual perception process enables us to recognize object attributes such as lightness colourfulness texture and gloss reveals how a designer who understands the role of these lighting patterns in the perceptual process may employ them either to reveal or to subdue or to enhance the appearance of selected object attributes by creating appropriate spatial distributions of light carefully explains calculational techniques and provides easy to use spreadsheets so that layouts of lamps and luminaires are derived that can be relied upon to achieve the required illumination distributions Practical lighting design involves devising three dimensional light fields that create luminous hierarchies related to the visual

significance of each element within a scene By providing you with everything you need to develop a design concept from the understanding of how lighting influences human perceptions of surroundings through to engineering efficient and effective lighting solutions Kit Cuttle instills in his readers a new found confidence in lighting design *LED Lighting* Malvin Carl Teich, 2025-04-14 LED Lighting is a self contained and introductory level book featuring a blend of theory and applications that thoroughly covers this important interdisciplinary area Building on the underlying fields of optics photonics and vision science it comprises four parts PART I is devoted to fundamentals The behavior of light is described in terms of rays waves and photons Each of these approaches is best suited to a particular set of applications The properties of blackbody radiation thermal light and incandescent light are derived and explained The essentials of semiconductor physics are set forth including the operation of junctions and heterojunctions quantum wells and quantum dots and organic and perovskite semiconductors PART II deals with the generation of light in semiconductors and details the operation and properties of III V semiconductor devices MQWLEDs microLEDs quantum dot devices QLEDs WQLEDs organic semiconductor devices OLEDs SMOLEDs PLEDs WOLEDs and perovskite devices PeLEDs PPeLEDs QPeLEDs PeWLEDs PART III focuses on vision and the perception of color as well as on colorimetry It delineates radiometric and photometric quantities as well as various measures of luminous efficacy and efficiency It also elucidates the significance of commonly used LED lighting metrics such as the color rendering index CRI color temperature CT correlated color temperature CCT and chromaticity diagram PART IV is devoted to LED lighting focusing on its history and salutary features and on how this modern form of illumination is deployed It describes the principal components used in LED lighting including phosphor conversion LEDs PCLEDs for generating cool and warm white light chip on board COB devices color mixing LEDs LED filaments retrofit LED lamps hybrid devices LED luminaires and OLED light panels It concludes with a discussion of smart and connected lighting that reviews plant centric lighting and highlights the roles of gamma and circadian brain rhythms in human centric lighting Finally the performance metrics for traditional and LED light sources are summarized Each chapter contains practical examples highlighted equations color coded figures and an extensive bibliography
