Nehdi,Harish Chandra Arora,Krishna Kumar,Robertas Damaševičius,Aman Kumar,2024-02-13 Artificial Intelligence Applications for Sustainable Construction presents the latest developments in AI and ML technologies applied to real world civil engineering concerns With an increasing amount of attention on the environmental impact of every industry more construction projects are going to require sustainable construction practices This volume offers research evidence simulation results and case studies to support this change Sustainable construction in fact not only uses renewable and recyclable materials when building new structures or repairing deteriorating ones but also adopts all possible methods to reduce energy consumption and waste The concisely written but comprehensive practical knowledge put forward by this international group of highly specialized editors and contributors will prove to be beneficial to engineering students and professionals alike Presents convincing success stories that encourage application of AI powered tools to civil engineering Provides a wealth of valuable technical information to address and resolve many challenging construction problems Illustrates the most recent shifts in thinking and practice for sustainable construction *Geothermal Water Management* Jochen Bundschuh,Barbara Tomaszewska,2018-03-12 Availability of and adequate accessibility to freshwater and energy are two key technological and scientific problems of global significance At the end of the 20th century the deficit of water for human consumption and economic application forced us to focus on rational use of resources Increasing the use of renewable energy sources and improving energy efficiency is a challenge for the 21st century Geothermal energy is heat energy generated and stored in the Earth accumulated in hydrothermal systems or in dry rocks within the Earth s crust in amounts which constitute the energy resources The sustainable management of geothermal energy resources should be geared towards optimization of energy recovery but also towards rational management of water resources since geothermal water serves both as energy carrier and also as valuable raw material Geothermal waters depending on their hydrogeothermal characteristics the lithology of the rocks involved the depth at which the resources occur and the sources of water supply may be characterized by very diverse physicochemical parameters This factor largely determines the technology to be used in their exploitation and the way the geothermal water can be used This book is focused on the effective use of geothermal water and renewable energy for future needs in order to promote modern sustainable and effective management of water resources The research field includes crucial new areas of study an improvement in the management of freshwater resources through the use of residual geothermal water a review of the technologies available in the field of geothermal water treatment for its re use for energetic purposes and freshwater production and the development of balneotherapy The book is aimed at professionals academics and decision makers worldwide water sector representatives and administrators business enterprises specializing in renewable energy management and water treatment working in the areas of geothermal energy usage water resources water

supply and energy planning This book has the potential to become a standard text used by educational institutions and research development establishments involved in the geothermal water management **Directory of Scientific Research in Indian Universities** ,1974 Selected Water Resources Abstracts ,1991 **Entropy and Energy Dissipation in Water Resources** V.P. Singh,M. Fiorentino,2012-12-06 Since the landmark contributions of C E Shannon in 1948 and those of E T Jaynes about a decade later applications of the concept of entropy and the principle of maximum entropy have proliferated in science and engineering Recent years have witnessed a broad range of new and exciting developments in hydrology and water resources using the entropy concept These have encompassed innovative methods for hydrologic network design transfer of information flow forecasting reliability assessment for water distribution systems parameter estimation derivation of probability distributions drainage network analysis sediment yield modeling and pollutant loading bridge scour analysis construction of velocity profiles comparative evaluation of hydrologic models and so on Some of these methods hold great promise for advancement of engineering practice permitting rational alternatives to conventional approaches On the other hand the concepts of energy and energy dissipation are being increasingly applied to a wide spectrum of problems in environmental and water resources Both entropy and energy dissipation have their origin in thermodynamics and are related concepts Yet many of the developments using entropy seem to be based entirely on statistical interpretation and have seemingly little physical content For example most of the entropy related developments and applications in water resources have been based on the information theoretic interpretation of entropy We believe if the power of the entropy concept is to be fully realized then its physical basis has to be established *National Management Measures to Control Nonpoint Source Pollution from Agriculture* ,2003 *Advances in Hydrology and Climate Change* Surendra Kumar Chandniha,Anil Kumar Lohani,Gopal Krishan,Ajay Krishna Prabhakar,2022-11-24 Highlighting recent trends that employ innovative management and conservation approaches this volume provides an informative overview of the issues and challenges in water resources affected by climate change such as drought flooding glacier changes and overbuilt up urban areas Focusing on surface and groundwater related issues the book presents solutions that include such methods as morphometric assessment parameter estimation long term trend analysis sustainability indexes storm water management models entropy based measurement of long term precipitation and more The volume focuses on providing a better understanding of climatic uncertainty through hydrometeorological data sets and their application in hydrological modeling These analyses help to serve as the basis for the design of flood control and water usage management policies *Water Marketing in the Southwest--* Bonnie Saliba,David B. Bush,William Edwin Martin,1987 **Instant Insights: Irrigation management in horticultural production** Dr Andre da Silva,Dr Timothy Coolong,Dr Denise Neilsen,Dr Gerry Neilsen,E. Simonne,M. Rouphael, Prof Alberto Pardossi, 2023-09-19 This collection features six peer reviewed reviews on irrigation management in horticultural production The first chapter considers recent advances in irrigation techniques used in sustainable vegetable cultivation and reviews the performance and efficiency of these systems The second chapter details the need to optimise precision in orchard irrigation management focussing on matching water supply to plant demand as a means of achieving this The third chapter assesses irrigation management systems for tomato production and how these can be optimised alongside nutrient management to ensure the production of safe and nutritious tomatoes The fourth chapter summarises the common types of irrigation systems found in soilless culture production as well as the emergence of new systems including plant based sensing and monitoring systems The fifth chapter highlights the need for more sustainable water use in ornamental production systems and the methods which can be used to achieve this such as reducing runoff volume The final chapter considers recent advances in irrigation management in greenhouse cultivation focussing on water balance crop evapotranspiration techniques and irrigation scheduling

Environmental Processes and Management Raj Mohan Singh, Prabhakar Shukla, Prachi Singh, 2020-02-17 This book presents an in depth science based approach to applying key project management and spatial tools and practices in environmental projects Providing important data for those considering projects that balance social economic growth against minimizing its ill effects on planet Earth the book discusses various aspects of environmental engineering as well as formula and analytical approaches required for more informed decision making Beginning with a broad overview of the factors and features of environmental processes and management the book then clearly details the general application of fundamental processes the characteristics of the different systems in which they occur and the way in which these factors influence process dynamics environmental systems and their possible remedies While primarily intended for professionals responsible for the management of environmental projects or interested in improving the overall efficiency of such projects it is also useful for managers in the private public and not for profit sectors Further it is a valuable resource for students at both undergraduate and postgraduate levels and an indispensable guide for anyone wanting to develop their skills in modern environmental management and related techniques

Renewable Energy Technologies for Water Desalination Hacene Mahmoudi, Noredine Ghaffour, Mattheus Goosen, Jochen
