Nilsson,2014-05-12 Readings in Artificial Intelligence focuses on the principles methodologies advancements and approaches involved in artificial intelligence The selection first elaborates on representations of problems of reasoning about actions a problem similarity approach to devising heuristics and optimal search strategies for speech understanding control Discussions focus on comparison with existing speech understanding systems empirical comparisons of the different strategies analysis of distance function approximation problem similarity problems of reasoning about action search for solution in the reduction system and relationship between the initial search space and the higher level search space The book then examines consistency in networks of relations non resolution theorem proving using rewriting rules for connection graphs to prove theorems and closed world data bases The manuscript tackles a truth maintenance system elements of a plan based theory of speech acts and reasoning about knowledge and action Topics include problems in reasoning about knowledge integration knowledge and action models of plans compositional adequacy truth maintenance mechanisms dialectical arguments and assumptions and the problem of control The selection is a valuable reference for researchers wanting to explore the field of artificial intelligence      IJCAI ,1993      Proceedings of the ... International Joint Conference on Artificial Intelligence ,1993      *Optimization of Object-oriented and Concurrent Programs* John Bradley Plevyak,University of Illinois at Urbana-Champaign. Department of Computer Science,1996 Abstract High level programming language features have long been seen as improving programmer efficiency at some cost in program efficiency When features such as object orientation and fine grained concurrency which greatly simplify expression of complex programs are used parsimoniously their effectiveness is mitigated It is my thesis that these features can be implemented efficiently through interprocedural analysis and transformation By specializing their implementation to the contexts in which they are used the program s

efficiency is not adversely affected by the flexibility of the language The specific contributions herein are 1 an adaptive flow analysis for practical precise analysis of object oriented programs 2 a cloning algorithm for building specialized versions of general abstractions 3 a set of optimizations for removing object oriented and fine grained concurrency overhead and 4 a hybrid sequential parallel execution model which adapts to the availability of data The effectiveness of this framework has been empirically validated on standard benchmarks It is publicly available as part of the Illinois Concert system <http://www.cs.csa.cornell.edu>
