*Innovations in cryoconservation of animal genetic resources* Food and Agriculture Organization of the United Nations, Boes, J, Boettcher, P, Honkatukia, M, 2023-01-17 The livestock sector faces a range of challenges including climate change emerging diseases competition for natural resources and evolving demand for animal source foods which is increasing globally especially in developing countries Genetic diversity of livestock is a key resource for allowing livestock

keepers to address these challenges but this diversity has been in a state of decline The diminishing genetic diversity thus represents yet another obstacle for sustainable livestock production Cryoconservation i e ex situ in vitro conservation of genetic resources through gene banking provides one of the most powerful tools governments and other stakeholders have to manage genetic diversity in both the short and long term and thereby provide future generations with the tools to meet the challenges ahead Gene banking genetic resources fits within the context of the Global Plan of Action for Animal Genetic Resources which was developed and adopted by FAO Member Nations Specifically Strategic Priority 9 of the Global Plan of Action is Establish or strengthen ex situ conservation programmes and Strategic Priority 11 urges countries to Develop approaches and technical standards for conservation To assist countries in the implementation the Global Plan of Action FAO worked with experts from around the world to prepare technical guidelines In 2012 FAO published FAO Guidelines on Cryoconservation of animal genetic resources Gene banking is a long term effort that needs to be viewed in terms of decades rather than years as demonstrated by similar systems for agricultural crops The responsibility for establishing such resources lies squarely within governments roles of providing public goods and food security Gene banking of animal genetic resources is a technology intense undertaking and the associated technologies are in a continual state of research and development The livestock sector also continues to evolve rapidly Since the development and release of the previous guidelines numerous changes have taken place Critical among these is a greater appreciation of the opportunities for actively utilizing cryopreserved material to enhance management of in vivo populations rather than as simply an insurance policy to protect breeds against extinction This key development has led to further changes in gene bank management First interaction with users of the stored material has increased This in turn has created a need to involve stakeholders more closely in the management of genetic collections and to better monitor and document the processes of gene banking to ensure quality management

*Animal Husbandry* Sándor Kukovics, 2022-11-09 This volume presents selected issues in the complex and diverse science of animal husbandry The use of computer programs provides an opportunity to improve breeding and optimize farm management At the same time the use of traditional breeding methods is also of decisive importance Knowledge of animal welfare and animal wellness is of great help in controlling animal health issues and in economic production In the biological processes of reproduction of dairy cows the events of the 100 days after calving are of fundamental importance Production systems influence the process of product production in which the relationship between animal products and human health goes far beyond animal husbandry and to which the issue of greenhouse gases is also connected The quality of manufactured meat products is influenced by both on farm and off farm factors but good meat cannot be produced from low quality animals even with excellent slaughterhouse work Background knowledge of animal

health including the microbiome in the digestive tract which makes use of the feed makes this activity more effective which is of particular importance in the case of broiler chickens Knowing the behavioural characteristics of animals rams enables better management Many horse breeds are capable of artificial gaits as a result of breeding and selection processes Comparative knowledge of the movements of these horse breeds also helps to understand their differences The quality of life of animals and the quality of manufactured products are also affected by polycyclic aromatic hydrocarbons from the environment which being stored and enriched in fat containing tissues can also have adverse effects on the human consumer Each topic presented not only offers specialist knowledge but makes interesting reading in its own right
