Encyclopedia of Artificial Intelligence Philip L. Frana, Michael J. Klein, 2021-04-07 This authoritative reference work will provide readers with a complete overview of artificial intelligence AI including its historic development and current status existing and projected AI applications and present and potential future impact on the United States and the world Some people believe that artificial intelligence AI will revolutionize modern life in ways that improve human existence Others say that the promise of AI is overblown Still others contend that AI applications could pose a grave threat to the economic security of millions of people by taking their jobs and otherwise rendering them obsolete or even worse that AI could actually spell the end of the human race This volume will help users understand the reasons AI development has both spirited defenders and alarmed critics explain theories and innovations like Moore's Law mindcloning and Technological Singularity that drive AI research and debate and give readers the information they need to make their own informed judgment about the promise and peril of this technology All of this coverage is presented using language and terminology accessible to a lay audience
International Perspectives on Artificial Intelligence J. Mark Munoz, Alka Maurya, 2022-01-11 Artificial Intelligence or AI is set to redefine our day to day activities Many companies across the globe are engaged in doing research on the application of AI in almost each and every aspect of our life Many companies have already integrated AI in their manufacturing supply chain marketing and after sales operations but there is a lot that needs to be done to capitalize the full potential of this technology International Perspectives on Artificial Intelligence is an attempt to put together the work done across various countries on adapting and integrating AI not only in organizations but also at individual and social levels

Optimisation of Massively Parallel Neural Networks Michael Oldroyd, 2004-12 Book Description Most current artificial neural networks exist only within software simulators running on conventional computers Simulators can provide great flexibility but require immensely powerful and costly hardware for even very small networks An artificial neural network implemented as a custom integrated circuit could operate many thousands of times faster than any simulator as each neuron can operate simultaneously A significant problem with implementing neural networks in hardware is that larger networks require a great deal of silicon area making them too costly to design and produce In this book I test the effectiveness of a number of algorithms that reduce the size of a trained neural network while maintaining accuracy
Author Biography Michael Oldroyd is a software development veteran who started programming professionally back in 1992 He is now development manager at AES Data Systems He has worked as a consultant and software developer for a number of international

organisations including Mobil Oil The European Commission Deutsche Bank Compaq Computer and the Cabinet Office He has developed several bespoke AI trading and decision support tools used on trading floors in the currency stock and energy markets He is a professional member of the IEEE and the Computational Intelligence Society

Multisensor Fusion: A Minimal Representation Framework Rajive Joshi, Arthur C Sanderson, 1999-12-13 The fusion of information from sensors with different physical characteristics such as sight touch sound etc enhances the understanding of our surroundings and provides the basis for planning decision making and control of autonomous and intelligent machines The minimal representation approach to multisensor fusion is based on the use of an information measure as a universal yardstick for fusion Using models of sensor uncertainty the representation size guides the integration of widely varying types of data and maximizes the information contributed to a consistent interpretation In this book the general theory of minimal representation multisensor fusion is developed and applied in a series of experimental studies of sensor based robot manipulation A novel application of differential evolutionary computation is introduced to achieve practical and effective solutions to this difficult computational problem

Artificial intelligence in application Thomas Barton, Christian Müller, 2024-07-10 The book shows application potentials of artificial intelligence in various industries and presents application scenarios on how a practical implementation can take place The starting point is the description of legal aspects which includes a European regulation for artificial intelligence and addresses the question of the permissibility of automated decisions The description of various application potentials mostly industry related and the presentation of some application scenarios form the focus of the topic volume The book is based on the question of how artificial intelligence can be used in entrepreneurial practice It offers important information that is just as relevant for practitioners as for students and teachers This book is a translation of an original German edition The translation was done with the help of artificial intelligence machine translation by the service DeepL.com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation

A Symbolic and Connectionist Approach To Legal Information Retrieval Daniel E. Rose, 2013-06-17 Many existing information retrieval IR systems are surprisingly ineffective at finding documents relevant to particular topics Traditional systems are extremely brittle failing to retrieve relevant documents unless the user's exact search string is found They support only the most primitive trial and error interaction with their users and are also static Even systems with so called relevance feedback are incapable of learning from experience with users SCALIR a Symbolic and Connectionist Approach to Legal Information Retrieval a system for assisting research on copyright law has been designed to address these problems By using a hybrid of symbolic and connectionist artificial intelligence techniques SCALIR develops a conceptual representation of document relationships without explicit knowledge engineering SCALIR's direct manipulation interface encourages users to browse through the space of documents It then uses these browsing patterns to improve its performance by modifying its representation resulting in a communal repository of expertise for all of its users SCALIR's

representational scheme also mirrors the hybrid nature of the Anglo American legal system While certain legal concepts are precise and rule like others which legal scholars call open textured are subject to interpretation The meaning of legal text is established through the parallel and distributed precedence based judicial appeal system SCALIR represents documents and terms as nodes in a network capturing the duality of the legal system by using symbolic semantic network and connectionist links The former correspond to a priori knowledge such as the fact that one case overturned another on appeal The latter correspond to statistical inferences such as the relevance of a term describing a case SCALIR s text corpus includes all federal cases on copyright law The hybrid representation also suggests a way to resolve the apparent incompatibility between the two prominent paradigms in artificial intelligence the classical symbol manipulation approach and the neurally inspired connectionist approach Part of the book focuses on a characterization of the two paradigms and an investigation of when and how as in the legal research domain they can be effectively combined Changes of Problem Representation

Eugene Fink, 2013-03-20 The purpose of our research is to enhance the efficiency of AI problem solvers by automating representation changes We have developed a system that improves the description of input problems and selects an appropriate search algorithm for each given problem Motivation Researchers have accumulated much evidence on the importance of appropriate representations for the efficiency of AI systems The same problem may be easy or difficult depending on the way we describe it and on the search algorithm we use Previous work on the automatic improvement of problem descriptions has mostly been limited to the design of individual learning algorithms The user has traditionally been responsible for the choice of algorithms appropriate for a given problem We present a system that integrates multiple description changing and problem solving algorithms The purpose of the reported work is to formalize the concept of representation and to confirm the following hypothesis An effective representation changing system can be built from three parts a library of problem solving algorithms a library of algorithms that improve problem descriptions a control module that selects algorithms for each given problem **An Introduction to Natural Computation** Dana H. Ballard, 1999-01-22 This

book provides a comprehensive introduction to the computational material that forms the underpinnings of the currently evolving set of brain models It is now clear that the brain is unlikely to be understood without recourse to computational theories The theme of An Introduction to Natural Computation is that ideas from diverse areas such as neuroscience information theory and optimization theory have recently been extended in ways that make them useful for describing the brains programs This book provides a comprehensive introduction to the computational material that forms the underpinnings of the currently evolving set of brain models It stresses the broad spectrum of learning models ranging from neural network learning through reinforcement learning to genetic learning and situates the various models in their appropriate neural context To write about models of the brain before the brain is fully understood is a delicate matter Very detailed models of the neural circuitry risk losing track of the task the brain is trying to solve At the other extreme models

that represent cognitive constructs can be so abstract that they lose all relationship to neurobiology An Introduction to Natural Computation takes the middle ground and stresses the computational task while staying near the neurobiology
