Aligning Lean and Value-based Management Gerd Kaufmann,2020-03-06 This book explores the relationship between and the compatibility of lean management LM and value based management VBM approaches at the systems level It then develops a model to improve LM and VBM professional practice by fostering a shared understanding of the value creation process within a lean system and in doing so helps to remove existing barriers The results promote future fruitful alliances between a company s operational and financial communities enhancing the benefits to the enterprise and its stakeholders The book is of primary interest to LM and VBM professionals and researchers *The Dynamics of Care* Eric

Wolstenholme,Douglas McKelvie,2019-10-10 This book describes numerous projects which shed light on some of the most persistent issues of the day in health and social care The work demonstrates the importance of embedding the concept of flow into everyday health and social care thinking and creates insights into patient journeys through different conditions and treatments It suggests that improving throughput across agencies is the key way to improving the performance of health treatment whereas increasing capacity is the key way to improving the performance of social care by retaining independent living The authors conclude that for state provided care balancing health and social care provision can eliminate the many stressful fire fighting strategies hospitals have to undertake when faced with high demands and this is a win win scenario in terms of patients staff and costs Further that there is a need for better understanding of the dynamics of population ageing the dynamics of health conditions and the provision of better integrated information systems The book will be a valuable resource for practitioners clinicians managers and academics in health social work public health and public policy in many countries In this important book Eric Wolstenholme and Douglas McKelvie bring two lifetimes of award winning experience in applying system dynamics to improving our very clinically advanced but often dysfunctional care systems David F Andersen O Leary Distinguished Service Professor Emeritus State University of New York Albany USA Health and social care suffer from some persistent and serious problems which not only undermine well intended care but also impose considerable costs in many societies This very welcome and exceptional book offers the hope of sound and sustainable solutions to many of these issues Kim Warren Strategy Dynamics London UK **Risk Thinking for Cloud-Based Application Services** Eric

Bauer,2017-04-07 Many enterprises are moving their applications and IT services to the cloud Better risk management results in fewer operational surprises and failures greater stakeholder confidence and reduced regulatory concerns proactive risk management maximizes the likelihood that an enterprise s objectives will be achieved thereby enabling organizational success This work methodically considers the risks and opportunities that an enterprise taking their applications or services onto the cloud must consider to obtain the cost reductions and service velocity improvements they desire without suffering the consequences of unacceptable user service quality *Proceedings of 20th International Conference on Industrial Engineering and Engineering Management* Ershi Qi,Jiang Shen,Runliang Dou,2013-12-16 The International Conference on

Industrial Engineering and Engineering Management is sponsored by the Chinese Industrial Engineering Institution CMES which is the only national level academic society for Industrial Engineering. The conference is held annually as the major event in this arena. Being the largest and the most authoritative international academic conference held in China, it provides an academic platform for experts and entrepreneurs in the areas of international industrial engineering and management to exchange their research findings. Many experts in various fields from China and around the world gather together at the conference to review, exchange, summarize, and promote their achievements in the fields of industrial engineering and engineering management. For example, some experts pay special attention to the current state of the application of related techniques in China as well as their future prospects such as green product design, quality control, and management supply chain and logistics management to address the need for, amongst other things, low carbon energy saving and emission reduction. They also offer opinions on the outlook for the development of related techniques. The proceedings offers impressive methods and concrete applications for experts from colleges and universities, research institutions, and enterprises who are engaged in theoretical research into industrial engineering and engineering management and its applications. As all the papers are of great value from both an academic and a practical point of view, they also provide research data for international scholars who are investigating Chinese style enterprises and engineering management.

New Trends in Software Methodologies, Tools and Techniques Hamido Fujita, Roberto Revetria, 2012. Software is the essential enabling means for science and the new economy. It helps us to create a more reliable, flexible, and robust society. But software often falls short of our expectations. Current methodologies, tools, and techniques remain expensive and are not yet sufficiently reliable, while many promising approaches have proved to be no more than case by case oriented methods. This book contains extensively reviewed papers from the eleventh International Conference on New Trends in software Methodology Tools and Techniques SoMeT_12 held in Genoa, Italy, in September 2012. The conference provides an opportunity for scholars from the international research community to discuss and share research experiences of new software methodologies and techniques, and the contributions presented here address issues ranging from research practices and techniques and methodologies to proposing and reporting solutions for global world business. The emphasis has been on human centric software methodologies, end user development techniques, and emotional reasoning for an optimally harmonized performance between the design tool and the user. Topics covered include the handling of cognitive issues in software development to adapt it to the user's mental state and intelligent software design in software utilizing new aspects on conceptual ontology and semantics reflected on knowledge base system models. This book provides an opportunity for the software science community to show where we are today and where the future may take us.
