Aprender A Leer De Las Ciencias Cognitivas Al Aula Ciencia Que Ladraeur Serie Mayor Spanish Edition:

Aprender a leer Stanislas Dehaene, 2019-11-20 Entre los 5 y los 7 años de edad casi todos los niños aprenden a leer. Aunque a los adultos esto nos parezca un hecho natural se trata de una verdadera proeza que causa una revolución en el cerebro. Stanislas Dehaene, protagonista de los descubrimientos neurocientíficos más importantes, explica las claves de la ciencia de la lectura y su puesta en práctica en la escuela para orientar a los padres y los maestros que acompañan a los niños en su hazaña. Este libro describe el funcionamiento del cerebro que lee y explica que aprender a leer consiste en tomar conciencia de las estructuras de la lengua oral y conectarlas eficazmente con el código visual de las letras. Atentos a la aplicación de sus conocimientos en la escuela y en el ámbito familiar, Dehaene y su equipo no se limitan a un nicho; más todo, ofrecen una serie de principios educativos que facilitan el descubrimiento de la lectura. Así, los juegos con los sonidos de las palabras tanto como la atención debidamente concentrada permiten acelerar la automatización del desciframiento y liberar recursos en la mente para dedicar a la comprensión de los textos. El avance gradual, la diversidad de ejemplos y la adaptación al nivel de los niños contribuyen a mejorar la enseñanza garantizando la diversidad en el aula. La clara y útil explicación no pierde de vista las posibles dificultades como la adquisición de la lectura en medios desfavorecidos y también la dislexia. Con la convicción de que una política educativa rigurosa y estimulante para los maestros puede traer sus frutos, se presentan aquí experiencias exitosas que aplicaron estas ideas y también una orientación pedagógica basada en las dificultades propias de nuestra lengua. Aprender a leer confirma con creces que es deseable y posible atravesar el puente que lleva de los laboratorios a las aulas.

¿Cómo aprendemos a leer? Héctor Ruiz Martín, 2025 Aprender a leer constituye un reto cognitivo extraordinario. Comprender el modo en que nuestra mente es capaz de lograrlo puede ayudarnos a orientar la enseñanza de la lectura para contribuir al desarrollo de esta competencia esencial. En su nuevo libro *Cómo aprendemos a leer*, Héctor Ruiz Martín recorre los fundamentos científicos del aprendizaje lector y ofrece una guía clara, estructurada y rigurosa para docentes y profesionales de la educación que deseen basar su práctica en lo que sugiere la evidencia científica. A lo largo de sus cinco bloques temáticos, el autor, director de la International Science Teaching Foundation e investigador en psicología cognitiva del aprendizaje y la memoria, explora conceptos clave como los factores que influyen en la motivación por leer, las etapas de la decodificación, las bases de la comprensión lingüística, las estrategias didácticas más eficaces y las dificultades comunes como la dislexia. Además, dedica un capítulo entero a desmontar mitos y prácticas pseudocientíficas que todavía persisten en la enseñanza de la lectura. Con un estilo accesible y directo pero sin renunciar al rigor, *Cómo aprendemos a leer* resume lo que las ciencias cognitivas han descubierto sobre enseñar a leer y lo traduce en orientaciones prácticas para el aula. Se trata así de una herramienta valiosa para quienes buscan mejorar la enseñanza de la lectura valiéndose de las aportaciones de la ciencia. Un texto introductorio ameno y accesible sobre qué nos dice la ciencia acerca de cómo aprendemos a leer y sobre qué podemos hacer para enseñar a leer basándonos en estos principios. La investigación en psicología y neurociencia lleva d

cadáveres acumulando evidencias sobre cómo aprendemos a leer y sobre qué métodos de enseñanza son los más prometedores para no dejar a ningún niño o niña atrás en el desarrollo de esta habilidad tan fundamental para la vida. Este libro pretende sintetizar todo este conocimiento y acercarlo de un modo ameno, comprensible y práctico a quienes se enfrentan a diario al reto de enseñar a leer con la intención de ayudarles en tan encomiable misión.
