

Developmental Psychology Study Notes – Test 1

Lecture One: Intro to Developmental Psychology

- Defined as change over time ***Development is not equal to change***

Historical Beliefs about Children: work at a young age, children are tiny adults, debate over crying/attending

Preformationism: belief that adult-like capacities (desires and interests) are present in early childhood

***Darwin** – compared child development to that of our near relatives – chimpanzees – in an attempt to understand, this led to more study of development and the publication of his book “The Origin of Species”

Developmental changes are:

1. **Orderly:** changes follow a logical sequence (all pave the way for future change)
2. **Cumulative:** each change includes what came before and builds off it (eg. crawling to walking)
3. **Directional:** always moves towards greater sophistication or complexities (always adapting)

Qualitative change: changes in type or kind, **Quantitative change:** changes in amount

Continuous development: gradual, qualitative changes

Discontinuous development: abrupt, qualitative changes

Why study development?

- Understand biological and cultural processes
- Provides insight into certain behaviours
- It encompasses a wide variety of psychological perspectives and how they interact

Periods of Development: “Domains”

1. Prenatal – Conception to birth
2. Infancy – 0 to 2 years old
3. Early childhood – 2 to 6 years old
4. Middle childhood – 6 to 12 years old
5. Adolescence – 12 to 18 years old

*each child moves through these in a unique way

Processes of Development:

- ⇒ Biological: changes in an individual’s physical nature (height, weight gain, inherited genes)
- ⇒ Cognitive: changes in thought, intelligence and language
- ⇒ Socio-emotional: changes in relationships with other people, changes in emotion, and personality changes

****all of these are intertwined** – change in one domain can influence change in other domains

- ⇒ Development is greatly impacted by surroundings, including the: physical environment, neighborhood or community, cultural beliefs, family and peers.

Nature vs. Nurture Debate:

- ⇒ Nature: inherited biological conditions
- ⇒ Nurture: acquired qualities based on experience

****BOTH ARE CORRECT**

Plasticity:

Critical periods: a time during development that is crucial for a particular feature to develop

Sensitive periods: a time during development where it is **optimal** for a particular feature to develop (eg. Language: early exposure makes it easier to learn)
