Digital Media Stacey O'Neal Irwin, 2016-04-29. Digital Media: Human Technology Connection examines what it is like to be alive in today's technologically textured world and showcases specific digital media technologies that make this kind of world possible. So much of human experience occurs through digital media that reflection on the process and proliferation of digital consumption has become necessary. This book takes on that task through an interdisciplinary array of sources including philosophy media studies film studies media ecology and philosophy of technology. When placed in the interpretive lenses of artifact instrument and tool digital media can be studied in a uniquely different way that pushes the boundaries on production distribution and communication and alters the way humans and technology connect with each other and the world. In the first section Raw Materials Stacey O'Neal Irwin examines pertinent concepts like digital media philosophy of technology phenomenology and postphenomenology. In the second Feeling the Weave Irwin uses the postphenomenological framework to explore empirical cases focused on deep analysis of screens sound photo manipulation data mining aggregate news and self tracking. Postphenomenological concepts like multistability variational theory micropereception macropereception embodiment technological mediation are explored. Digital Media demonstrates that digital media technologies and digital content are not neutral. They texture the world in multiple and varied ways that transform human abilities augment experience and pattern the world in significant ways.

Electromechanical Transmitters for ELF/VLF Radio Jarred S. Glickstein, Soumyajit Mandal, 2022-11-02. This book describes a new extremely low frequency ELF very low frequency VLF miniaturized transmitter concept based on the mechanical motion of permanent magnets or electrets. The authors explain how utilizing the very high energy density of modern ferromagnetic and ferroelectric materials such electromechanical transmitters can provide much higher field generation efficiency than conventional antennas thus enabling practical ELF VLF wireless communications links. The text begins with the fundamental challenges of such links and provides an historical overview of the attempts that have been made to address these challenges. It then focuses on the design and implementation of practical electromechanical ELF VLF transmitters which is an interdisciplinary subject that spans multiple research areas including electromagnetics power electronics control systems and mechanical design. The authors also describe how such transmitters can be combined with receivers and signal processing algorithms to realize complete ELF VLF links in challenging environments.

The Standardized Coordination Task Assessment (SCTA) Oemig, Christoph,2023-02-06 Today s modern world often affords individuals to form teams to work together towards shared goals and objectives The need for tools to digitally support collaboration distributed in time and space increased over the past decades significantly with a recent sudden increase due to the Corona pandemic crisis The research goal in the field of computer supported cooperative work CSCW has always been to design systems that facilitate collaboration based on the understanding of groups and social interaction especially on how people coordinate their work In the real world coordination happens in a seemingly seamless and effortless way However the resulting mechanisms translated to digital systems often provide a clumsy and awkward experience as users lack the means for subtle and rich interaction beyond the spoken word After numerous failures revealing system deficits and a large number of ethnographic studies researchers identified awareness to become the support mechanism for effortless coordination in digital systems Yet instead of addressing the problem using appropriate methods and tools researchers found themselves trapped in circular reformulations of concepts and evaluations of prototypes on the basis of disciplinary preferences ignoring the basic characteristics of the objects of interest Even worse the most basic design tensions stemming from a use inspired perspective have not been resolved indicating a substantial problem with the evaluation of awareness and coordination support Effortless coordination cannot be reached without being measured thus not without an appropriate measurement approach This thesis introduces an appropriate assessment method for the efforts related to awareness and coordination support in cooperative settings the STANDARDIZED COORDINATION TASK ASSESSMENT SCTA Applying a use inspired basic research driven approach it creates and leverages an effort based operationalization of the two constructs derived from literature and

especially from a cognitive perspective A highly automated and scalable framework delivers quantitative results to be used for hypotheses validations that allows a benchmark based approximation of effortless coordination At the same time the method opens the door for a lot more use inspired basic research to resolve many of the still open design tensions and challenges
