1) a) $I_D = \frac{V_{in} - 2V_{D0n}}{R_1 + R_2}$
 $= \frac{2.5 - 1.4}{4k\Omega} = \frac{1.1V}{4k\Omega}$

$I_D = 275\mu A$

b) $I_S = 10^{-14} A$, $T = 300K$, $V_{D0n} = 0.7V$

$I_D = I_S (e^{V_D/\phi_T} - 1)$

where $\phi_T = \frac{kT}{q} = 26mV @ 300K$

⊛ $I_D = \frac{V_{in} - 2V_D}{R_1 + R_2} = I_S (e^{V_D/\phi_T} - 1)$
 $\frac{2.5 - 2V_D}{4k\Omega} = 10^{-14} (e^{V_D/0.026} - 1)$

iterating on this expression
 we can obtain.

$V_D = 0.628V$
 $I_D = 311\mu A$

looking not only at the treatment of circuits but also at the treatment of introductory coursework in engineering in general. Using the concept of abstraction the book attempts to form a bridge between the world of physics and the world of large computer systems. In particular it attempts to unify electrical engineering and computer science as the art of creating and exploiting successive abstractions to manage the complexity of building useful electrical systems. Computer systems are simply one type of electrical systems. Balances circuits theory with practical digital electronics applications. Illustrates concepts with real devices. Supports the popular circuits and electronics course on the MIT OpenCourseWare from which professionals worldwide study this new approach. Written by two educators well known for their innovative teaching and research and their collaboration with industry. Focuses on contemporary MOS technology.

Rajapakse, 2006-10-04 During the 1980s and early 1990s there was significant work in the design and implementation of hardware neurocomputers Nevertheless most of these efforts may be judged to have been unsuccessful at no time have hardware neurocomputers been in wide use This lack of success may be largely attributed to the fact that earlier work was almost entirely aimed at developing custom neurocomputers based on ASIC technology but for such niche uses this technology was never sufficiently developed or competitive enough to justify large scale adoption On the other hand gate arrays of the period mentioned were never large enough nor fast enough for serious artificial neural network ANN applications But technology has now improved the capacity and performance of current FPGAs are such that they present a much more realistic alternative Consequently neurocomputers based on FPGAs are now a much more practical proposition than they have been in the past This book summarizes some work towards this goal and consists of 12 papers that were selected after review from a number of submissions The book is nominally divided into three parts Chapters 1 through 4 deal with foundational issues Chapters 5 through 11 deal with a variety of implementations and Chapter 12 looks at the lessons learned from a large scale project and also reconsiders design issues in light of current and future technology *Makers of the Microchip* Christophe
