Advanced Physicochemical Treatment Processes Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shamma, 2007-11-10 The past thirty years have witnessed a growing worldwide desire that positive actions be taken to restore and protect the environment from the degrading effects of all forms of pollution air water soil and noise Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste continues to exist we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved This book is one of the volumes of the Handbook of Environmental Engineering series The principal intention of this series is to help readers formulate answers to the last two questions above

The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control. However, the realization of the ever increasing complexity and interrelated nature of current environmental problems renders it imperative that intelligent planning of pollution abatement systems be undertaken.

Sustainable Solutions for Environmental Pollution, Volume 1 Nour Shafik El-Gendy, 2021-09-20 SUSTAINABLE SOLUTIONS FOR ENVIRONMENTAL POLLUTION This first volume in a broad comprehensive two volume set Sustainable Solutions for Environmental Pollution concentrates on the role of waste management in solving pollution problems and the value added products that can be created out of waste turning a negative into an environmental and economic positive. Environmental pollution is one of the biggest problems facing our world today in every country, region and even down to local landfills. Not just solving these problems but turning waste into products even products that can make money is a huge game changer in the world of environmental engineering. Finding ways to make fuel and other products from solid waste setting a course for the production of future biorefineries and creating a clean process for generating fuel and other products are just a few of the topics covered in the groundbreaking new first volume in the two volume set Sustainable Solutions for Environmental Pollution. The valorization of waste including the creation of biofuels turning waste cooking oil into green chemicals providing sustainable solutions for landfills and many other topics are also covered in this extensive treatment on the state of the art of this area in environmental engineering.
