answering the research questions of interest This is not entirely unlike the relationship between the analysis and design phases of the systems development life cycle where the What of the analysis phase has to be translated into the How of the design phase The book can guide the identification of modules the How that are suitable for answering research questions the What It can aid in transitioning a conceptual domain of the research questions into a scaffolding of data analytic and data mining methods The book is also a guide to exploring what data under investigation holds For example an investigator may use the methodological modules presented in this book to generate a set of preliminary questions which after a careful consideration and a requisite culling could be formulated into a set of questions consistent within a selected theory or a framework Finally the book can be used as a generator of new research questions Applying every method in each of the book's modules opens a new dimension ripe with follow up questions such as Why is this so The answers to this question may provide new insight and lead to the development of a new theory
