Nutrients in upwelling areas are spread by ocean currents and the plankton of the seas supports a wealth of wildlife. In this Very Short Introduction Dorrik Stow analyses these most important components of our blue planet and considers their relationship with and exploitation by humans. He shows how the oceans are an essential resource to our overpopulated world and discusses why exploration and greater scientific understanding of the oceans, their chemistry and their mineral wealth are now a high priority. Stow also explores what we know of how oceans originate and evolve and change the shape of the seafloor and nature of its cover, the physical processes that stir the waters and mix such a rich chemical broth and the inseparable link between oceans and climate. As polar ice melts and sea levels rise, countless millions who have made their homes on low lying lands close to the sea are threatened. As scientific exploration of the seas gathers pace, the new knowledge gained of the ocean Earth systems and their interaction with the human environment is vital to our understanding of how we can preserve these ultimately fragile environments.

Geography John Morgan, David Lambert, 2005-06-21 When Geography specialists decide they want to teach it, it can be a daunting prospect to enter a real classroom, no matter how much subject knowledge they already possess. *Geography Teaching School Subjects 11-19* puts the subject into perspective and shows new teachers and student teachers how to make Geography accessible and interesting for their pupils. Divided into three sections, the book examines the theory and practice of teaching geography. Section one explores how teachers can frame their own knowledge for classroom practice; section two focuses on Geography in the classroom and curriculum development, as well as aspects of pedagogy and lesson design, evaluation and assessment; section three focuses on the teachers themselves and how they can view and work on professional development within their own subject area.
