

Diffusion Through A Membrane (STATE LAB)

In the **Final State**.... Iodine enters the cell and Glucose leaves the cell. Starch cannot leave the cell, since Starch molecules are too large. The cell turns a blue/black color due to the iodine (Starch indicator) and the Starch reacting with each other. Starch (milky white) + starch indicator (brown) = blue-black color. The inside of the bag turns blue-black while the outside stays brown, proving that indicator went in, but starch did not leave.

Glucose indicator (Benedict's) (blue) + glucose (clear) + HEAT = green, brown, red, or orange

Diffusion - movement of molecules from a region of high concentration to a region of low concentration - no energy needed (passive transport)

Osmosis - diffusion of water across a semipermeable cell membrane from region of high concentration to a region of low concentration - no energy needed (passive transport)

Onion Slide: Make a wet mount slide of a thin section of red onion cells. A small piece is placed in a drop of water on a microscope slide. A cover slip is placed on top by touching it to the water at an angle, and then carefully placing it on the specimen, trying not to get air bubbles underneath.

You should observe the following:

Place a 10% salt solution under the cover slip. This is done by putting a drop of salt solution next to one edge of the cover slip.

Membrane Technology for CO₂ Sequestration Zeinab Abbas Jawad, 2019-03-26 This book addresses the fundamentals of CO₂ storage for long term sequestration in a subsurface geologic formation In general membrane gas separation can find a large room of application in flue gas To achieve the development of this technology on a larger scale than which is possible in the lab we have to use membrane engineering Consequently greater emphasis is placed on novel materials for gas separation Possible design strategies and role of novel materials are discussed Additionally the latest progress in design and preparation of asymmetric membranes for natural gas purification are highlighted In fact further development should focus on module and process design in order to bring gas separation membrane technology into commercial application Therefore the key issues to propel current research towards industrial application are examined Besides the feasibility of implementing polyimide membrane for CO₂ removal under real industrial conditions and its economic viability are highlighted In order to exhibit excellent film forming properties zeolite membrane and cellulose acetate butyrate membrane are addressed Interestingly it was found that the most accurate theoretical three phase model is arguably revised Pal model with average percentage error of 0.74%

Destroyer of Worlds Frank Close, 2025-06-10 From the award winning science writer a new history of the development of nuclear power and the extraordinary minds behind it Henry Becquerel s accidental discovery in Paris in 1896 of a faint smudge on a photographic plate sparked a chain of discoveries which would unleash the atomic age Destroyer of Worlds is the story of how pursuit of this hidden source of nuclear power which began innocently and collaboratively was overwhelmed by the politics of the 1930s and following devastation of Hiroshima and Nagasaki opened the way to a still more terrible possibility a thermonuclear bomb the so called backyard weapon that could destroy all life on earth from anywhere The story spans decades and continents moving from Becquerel to Ernest Rutherford the Cambridge based New Zealand scientist who first split the atom expands to include Enrico Fermi in Rome Otto Hahn and Lise Meitner in Berlin and the Joliot Curies in Paris leading to the appearance of Robert Oppenheimer before climaxing with increasingly horrifying developments in the USA and USSR The roles of three remarkable women Lise Meitner Ida Noddack and Irene Curie are re evaluated and there are new insights into the work of Ettore Majorana Fermi s mercurial but brilliant assistant who mysteriously disappeared in 1938 possibly after foreseeing the explosive power of nuclear energy Above all this is a story of how knowledge is often advanced by personal convictions and relationships an indeed by chance in a remarkable way
