Heat lost by steel = Heat gained by water [energy balance equation]

$$m_b C_{pb} (100 - T_f) = m_w \times C_{pw} (T_f - 30)$$

K. VENKANNA, 2010-01-01 This comprehensive text on the basics of heat and mass transfer provides a well balanced treatment of theory and mathematical and empirical methods used for solving a variety of engineering problems The book helps students develop an intuitive and practical understanding of the processes by emphasizing the underlying physical phenomena involved Focusing on the requirement to clearly explain the essential fundamentals and impart the art of problem solving the text is written to meet the needs of undergraduate students in mechanical engineering production engineering industrial engineering auto mobile engineering aeronautical engineering chemical engineering and biotechnology **Previews of Heat and Mass Transfer**, 1993 *Foundations and Applications of Mechanics: Fluid mechanics* C. S. Jog, 2002 Foundations and Applications of Mechanics Volume II Fluid Mechanics shows how suitable approximations such as ideal fluid flow model boundary layer methods and the acoustic approximation can help solve problems of practical importance The author proceeds from the general to the particular making it clear at each stage what assumptions have been made to obtain a particular approximation In his discussion of compressible fluids Jog steers away from using gas tables and emphasizes obtaining solutions by numerical techniques an approach more amenable to computer solutions He discusses the control volume and the differential equation forms of governing equations in detail and uses examples to demonstrate the advantages and shortcomings of each approach *Convective Heat and Mass Transfer* William Morrow Kays, Michael E. Crawford, 1993 This text is designed for final year or graduate mechanical engineering students for the heat and mass transfer portion of a course in heat transfer engineering **Foundations and Applications of Mechanics: Continuum mechanics** C. S. Jog, 2002 **Thermodynamic Mechanism of Cryogenic Air Minimum Quantity Lubrication Grinding** Liu, Mingzheng, Li, Changhe, 2024-05-02 The achievement of high efficiency and precise

grinding of difficult to cut metals like titanium alloys is essential in the aerospace industry. However, the process often results in thermal damage to the workpiece surface, posing a significant technical challenge. While minimum quantity lubrication (MQL) has been used to aid titanium alloy grinding, its effectiveness is limited by insufficient heat dissipation and lubrication. As an alternative to normal temperature air for carrying micro lubricants, Cryogenic air has shown promise in improving oil film heat transfer and lubrication performance in the grinding zone, thus reducing workpiece surface thermal damage. The experimental state of the technology demands more comprehensive studies on its effectiveness and on the underlying mechanisms. **Thermodynamic Mechanism of Cryogenic Air Minimum Quantity Lubrication Grinding** addresses these challenges by providing a theoretical framework for understanding and optimizing cryogenic air minimum quantity lubrication in grinding processes, particularly for titanium alloys. It explores the physical characteristics of lubricants under cryogenic conditions, the influence of low temperatures on atomization, droplet formation dynamics, and heat transfer mechanisms within the grinding zone. By establishing quantitative relationships between cryogenic air parameters and lubricant properties, the book lays a foundation for enhancing the cooling lubrication mechanism of cryogenic air MQL in grinding processes. Researchers, scholars, and graduate students in universities and research institutes focusing on machining will find this book invaluable as it goes beyond the theoretical insights into practical solutions to enhance grinding efficiency and reduce thermal damage.
