Tribology Issues and Opportunities in MEMS Bharat Bhushan, 2012-12-06 Micro Electro Mechanical Systems MEMS is already about a billion dollars a year industry and is growing rapidly So far major emphasis has been placed on the fabrication processes for various devices There are serious issues related to tribology mechanics surface chemistry and materials science in the operation and manufacturing of many MEMS devices and these issues are preventing an even faster commercialization Very little is understood about tribology and mechanical properties on micro to nanoscales of the materials used in the construction of MEMS devices The MEMS community needs to be exposed to the state of the art of tribology and vice versa Fundamental understanding of friction stiction wear and the role of surface contamination and environmental debris in micro devices is required There are significant adhesion friction and wear issues in manufacturing and actual use facing the MEMS industry Very little is understood about the tribology of bulk silicon and polysilicon films used in the construction of these microdevices These issues are based on surface phenomena and cannot be scaled down linearly and these become increasingly important with the small size of the devices Continuum theory breaks down in the analyses e g in fluid flow of micro scale devices Mechanical properties of polysilicon and other films are not well characterized Roughness optimization can help in tribological improvements Monolayers of lubricants and other materials need to be developed for ultra low friction and near zero wear Hard coatings and ion implantation techniques hold promise

BioMEMS and Biomedical Nanotechnology Abraham P. Lee, James Lee, 2007-05-26 blends materials fabrication and structure issues of developing nanobio devices in a single volume treats major nanobio application areas such as drug delivery molecular diagnostics and imaging chapters written by the leading researchers in the field *Materials Research to Meet 21st-Century Defense Needs* National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Committee on Materials Research for Defense After Next, 2003-03-25 In order to achieve the revolutionary new defense capabilities offered by materials science and engineering innovative management to reduce the risks associated with translating research results will be needed along with the R D While payoff is expected to be high from the promising areas of materials research many of the benefits are likely to be evolutionary Nevertheless failure to invest in more speculative areas of research could lead to undesired technological surprises Basic research in physics chemistry biology and materials science will provide the seeds for potentially revolutionary technologies later in the 21st century
