Agricultural Digitization and Zhongyong Philosophy Yiyan Chen,Hooi Hooi Lean,Ye Li,2023-05-26 This interdisciplinary book combines digital technology with Eastern philosophy to examine how the concept of Zhongyong in Confucianism can be used to coordinate digital technology with sustainable agriculture Zhongyong comes from the connotation of moderate and sustainable in ancient Chinese culture It is with this concept in mind that this book presents a novel collaboration between philosophy and computer technology to explain how Zhongyong can play an important part in realizing agricultural digitization within a circular economy in order to help solve the current food crisis The book examines two popular yet contradictory digital technologies blockchain and the green data center It showcases how the use of traditional Chinese Zhongyong can promote the decentralization of blockchain and the centralization of the green data center and explains the advantages of using both technologies simultaneously The book puts forward a digital circular agricultural framework that embeds both blockchain and the green data center through an actual case study While this book specifically focuses on agriculture it also provides readers with a new perspective for thinking further on how to break down the disciplinary

barriers between the social sciences and natural sciences This book will be of great interest to students and scholars of agriculture digital technologies circular economy sustainable development and Eastern philosophy Reclaiming Food Security Michael S. Carolan, 2013-04-17 In this challenging work the author argues that the goal of any food system should not simply be to provide the cheapest calories possible A secure food system is one that affords people and nations in both the present and future the capabilities to prosper and lead long happy and healthy lives For a variety of reasons food security has come to be synonymous with cheap calorie security On this measure the last fifty years have been a remarkable success But the author shows that these cheap calories have also come at great cost to the environment individual and societal well being human health and the food sovereignty of nations The book begins by reviewing the concept of food security particularly as it has been enacted within agrifood and international policy over the last century After proposing a coherent definition the author then assesses empirically whether these policies have actually made us and the environment any better off One of the many ways the author accomplishes this task is by introducing the Food and Human Security Index FHSI in an original attempt to better measure and quantify the affording qualities of food systems A FHSI score is calculated for 126 countries based on indicators of objective and subjective well being nutrition ecological sustainability food dependency and food system market concentration The final FHSI ranking produces many counter intuitive results Why for example does Costa Rica top the ranking while the United States comes in at number fifty five The author concludes by arguing for the need to reclaim food security by returning the concept to something akin to its original spirit identified earlier in the book While starting at the level of the farm the concluding chapter focuses most of its attention beyond the farm gate recognizing that food security is more than just about issues surrounding production For example space is made in this chapter to address the important question of What can we eat if not GDP We need the author contends a thoroughly sociological rendering of food security a position that views food security not as a thing or an end in itself but as a process that ought to make people and the Planet better off
