IIW Recommendations for the Fatigue Assessment of Welded Structures By Notch Stress Analysis W

Fricke,2012-10-22 The notch stress approach for fatigue assessment of welded joints is based on the highest elastic stress at the weld toe or root In order to avoid arbitrary or infinite stress results a rounded shape with a reference radius instead of the actual sharp toe or root is usually assumed IIW recommendations for the fatigue assessment of welded structures by notch stress analysis reviews different proposals for reference radii together with associated S N curves Detailed recommendations are given for the numerical analysis of notch stress by the finite or boundary element method Several aspects are discussed such as the structural weakening by keyhole shaped notches and the consideration of multiaxial stress states Appropriate S N curves are presented for the assessment of the fatigue strength of different materials Finally four examples illustrate the application of the approach as well as the variety of structures which can be analysed and the range of results that can be obtained from different models Provides detailed recommendations for the number analysis of notch stress by the finite or boundary element method Discusses structural weakening by keyhole shaped notches and the consideration of multiaxial stress states Provides four comprehensive examples illustrating the variety of structures which can be analysed and the range of results that can be obtained from different models **Stress Determination for Fatigue**

The Fatigue Strength of Transverse Fillet Welded Joints T R Gurney,1991-01-03

This report is the result of a major study on the influence of both main plate thickness and of attachment size on the fatigue strength of joints with transverse non load carrying fillet welds In particular it defines the extent to which the size of the attachment might influence the thickness effect in such joints Through a whole range of different tests the study confirms that the present thickness effect correction for certain types of joint is too severe

Fatigue Assessment of Welded Joints by Local Approaches Dieter Radaj, 2006 **Cumulative Damage of Welded Joints** T R Gurney, 2006-08-25 Fatigue is a mechanism of failure which involves the formation and growth of cracks under the action of repeated stresses Ultimately a crack may propagate to such an extent that total fracture of the member may occur To avoid fatigue it is essential to design the structure with inherent fatigue strength However fatigue strength for variable amplitude loading is not a constant material property and any calculations are necessarily built on a number of assumptions Cumulative damage of welded joints explores the wealth of research in this important field and its implications for the design and manufacture of welded components After an Introduction chapter two introduces the constant amplitude database which contains results obtained in test conditions and which forms the basis of the basic S N curves for various types of joint Chapter three discusses the influence of residual stresses which can have a marked effect on fatigue behaviour Chapter four explores variable amplitude loading and the problem of how information from laboratory tests obtained under constant amplitude conditions can be applied to the design of structures for service conditions This problem is further investigated in the next chapter which is devoted to two and three level load testing Chapters six seven and eight look at the influence that the variety of variable loading spectra can have on fatigue strength whether narrow or wide band loading or cycles of small stress range Taking all of this knowledge chapter nine discusses structure designs Cumulative damage of welded joints is a comprehensive source of invaluable information for welding engineers supervisors inspection personnel and designers It will also be of great interest for academics working in the fields of structural and mechanical engineering Covers the wealth of research in the field of fatigue strength and its role in the design and manufacture of welded components Invaluable
