Recent Advances in Modeling and Forecasting Kaiyu Saburo Saito, Kenichi Ishibashi, Kosuke Yamashiro, 2023-09-08

This book is the first comprehensive presentation of a Kaiyu Markov model with covariates and a multivariate Poisson model with competitive destinations. These two models are core techniques when the authors and colleagues conduct their Kaiyu studies. The two models are usually used to forecast the effects of specific urban redevelopment on both the number of visitors and consumer shop around or Kaiyu movements. Their Kaiyu studies originated from the constructions of a Kaiyu Markov model and the disaggregated hierarchical decision Huff model almost simultaneously around the early 1980s. This book retrospectively reviews how these models have evolved from the start to the present state and previews the ongoing efforts to make further extensions of these models. The extension of the Huff model started from the disaggregated hierarchical decision Huff model with shop arounds. In retrospect, the model formulated the consumer's simultaneous choice of destinations as a joint probability. The mechanism to determine this joint probability was a recursive conditional probability system. Now the Huff model has shifted from joint probability to multivariate frequency Poisson with competitive destinations. On the other hand, the Kaiyu Markov model started from a descriptive model. Because it cannot forecast changes in shop arounds or consumer Kaiyu behaviors, the Kaiyu Markov model with covariates was developed in which entrance and shop around choice probabilities are explained by the respective two logit models with covariates such as distances and shop floor areas. The noticeable point is that it can explain consumers' probability of quitting their shop arounds. Thus the model enables one to evaluate the effects of urban revitalization policy that promotes consumers' shop arounds or Kaiyu behaviors. Furthermore, if the Kaiyu Markov model can estimate the actual numbers of flows of consumers' shop arounds among shopping sites, the corresponding money flows also can be estimated as economic effects. This book discusses from scratch the evolution of all these topics. Thus this book provides the basics of the Kaiyu Markov model, a tutorial for the theory and estimation of the conditional logit model, and a chapter serving as a practical research manual for forecasting changes caused by urban development based on consumers' Kaiyu behaviors. *Handbook of Economic Forecasting* G. Elliott, C. W. J. Granger, A. G. Timmermann, 2006-07-14. Section headings in this handbook include Forecasting Methodology, Forecasting Models, Forecasting with Different Data Structures, and Applications of Forecasting Methods. Federal Energy Regulatory Commission Reports United States. Federal Energy Regulatory Commission, **Neural Networks and the Financial Markets** Jimmy Shadbolt, 2012-12-06. This volume looks at financial prediction from a broad range of perspectives. It covers the economic arguments, the practicalities of the markets, how predictions are used, how predictions are made, how predictions are turned into something usable, asset locations. It combines a discussion of standard theory with state-of-the-art material on a wide range of information processing techniques as applied to cutting-edge financial problems. All the techniques are demonstrated with real examples using actual market data and show that it is possible to extract information

from very noisy sparse data sets. Aimed primarily at researchers in financial prediction, time series analysis and information processing, this book will also be of interest to quantitative fund managers and other professionals involved in financial prediction.

Computational Intelligence in Economics and Finance Paul P. Wang, 2013-03-09. Due to the ability to handle specific characteristics of economics and finance forecasting problems like e.g. non linear relationships, behavioral changes or knowledge based domain segmentation, we have recently witnessed a phenomenal growth of the application of computational intelligence methodologies in this field. In this volume, Chen and Wang collected not just works on traditional computational intelligence approaches like fuzzy logic, neural networks and genetic algorithms, but also examples for more recent technologies like e.g. rough sets, support vector machines, wavelets or ant algorithms. After an introductory chapter with a structural description of all the methodologies, the subsequent parts describe novel applications of these to typical economics and finance problems like business forecasting, currency crisis discrimination, foreign exchange markets or stock markets behavior.
